Roumanie Multiple:

Modern Uses of Multiple-Valued Logic M. Dunn, G. Epstein, 2012-12-06 This is a collection of invited papers from the 1975 International Symposium on Multiple valued Logic Also included is an extensive bibliography of works in the field of multiple valued logic prior to 1975 this supplements and extends an earlier bibliography of works prior to 1965 by Nicholas Rescher in his book Many Valued Logic McGraw Hill 1969 There are a number of possible reasons for interest in the present volume First the range of various uses covered in this collection of papers may be taken as indicative of a breadth which occurs in the field of multiple valued logic as a whole the papers here can do no more than cover a small sample question answering systems analysis of computer hazards algebraic structures relating to multiple valued logic algebra of computer programs fuzzy sets Second a large part of the interest in such uses and applications has occurred in the last twenty even ten years It would be too much to expect this to be reflected in Rescher's 1969 book Third in the 1970's a series of annual symposia have been held on multiple valued logic which have brought much of this into a sharp focus The 1971 and 1972 symposia were held at the SUNY at Buffalo the 1973 symposium at the University of Toronto and the 1974 symposium at West Virginia University Papers from these symposia are included in the bibliography which may be found in an appendix of this book Multiple Antiquities - Multiple Modernities Gábor Klaniczay, Michael Werner, Otto Gécser, 2011-09-12 Im 19

Stancu-Minasian, 2012-12-06 Mathematical programming has known a spectacular diversification in the last few decades This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created To write a monograph dedicated to a certain domain of mathematical programming is under such circumstances especially difficult In the present monograph we opt for the domain of fractional programming Interest of this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and/or economical functions for example cost/time cost/volume cost/profit or other quantities that measure the efficiency of a system For example the productivity of industrial systems defined as the ratio between the realized services in a system within a given period of time and the utilized resources is used as one of the best indicators of the quality of their operation Such problems where the objective function appears as a ratio of functions constitute fractional programming problem Due to its importance in modeling various decision processes in management science operational research and economics and also due to its frequent appearance in other problems that are not necessarily economical such as information theory numerical analysis stochastic programming decomposition algorithms for large linear systems etc the fractional programming method has received particular attention in the last three decades **Bulgaria, Hungary, Romania, the**

 Dan Dungaciú,Viorella Manolache,2019-11-06 100 Years since the Great Union of Romania is a pertinent witness to the
 course of Romanian political thinking It confirms that December 1918 demands to be celebrated as a fundamental historical
 event which imparts a prominent force to the continuing dynamics of the preposition since potentiating it not only with the
 structural valences of the initial moment and the starting point but also giving it the meaning of the plenary symbols of a
 historical act which after 100 years celebrates its establishment by reaffirming and confirming its fully mature vocation This
 volume is dedicated to the 100 years since the Great Union of all Romanians It will appeal to the wider academic community
 PhD students professors and researchers and to any reader interested in history history of political thoughts political
 philosophy and science or international relations **Blind Spots in the Spotlight** Raluca Iacob,2022-06-17 This book
 brings under a magnifying glass a little explored but significant topic the communications changes of the National Bank of
 Romania after 2008 Given the similarities and differences between central banks mechanisms and practices adopted its
 applicability and impact for other actors are incontestable The research incorporates valuable details on how the National
 Bank of Romania's communication changed during the Great Recession of 2008 as well as insightful data about the way in
 which different categories of public and media perceived this change The timeliness and significance of this research are
 noticeable as the central banks already entered a new era of communication challenges triggered by the Covid 19 pandemic
 and recently by the Russia Ukraine war Lessons from the past can contribute to what researchers name the second
 revolution in communication focusing on opening the central banks to the public and regaining trust especially in such a
 difficult period **Military Strategies of the New European Allies** Håkan Edström,Jacob Westberg,2022-12-30 This book
 analyses how and to what extent ex communist states have adjusted their defence strategies since joining the EU and NATO
 and how differences and similarities between their strategies can be explained Between 1999 and 2013 four phases of
 enlargement took place when the European Union EU and NATO allowed 11 new former communist states to enter both
 organisations These states share some common attributes and experiences related to strategic culture and common
 experiences during the Cold War era that can potentially explain similarities in behaviour and preferences among them
 However the strategic adjustments among these states are far from uniform In an effort to explain these differences the book
 introduces three intervening variables 1 differences in relative power and position in the international system 2 national
 geographical characteristics and 3 historical experiences related to formative periods of state building processes as well as
 wars and armed conflicts Empirically the book strives to present and analyse the defence strategies of each of the new allies
 by conducting a structured focused comparison of official strategic documents from the twenty first century for each of the

11 cases Theoretically and methodologically it introduces an analytical framework enabling us to explain both similarities and differences in the formulation of the strategies of the 11 states and to shed light on their external and internal efforts to promote their strategic interest by operationalising the dependent variable defence strategy The analytical framework combines elements of structural realism with classical realism and constructivist research on unit level characteristics related to relative power and perceptions of strategic exposure This book will be of much interest to students of strategic studies European Union policy NATO and International Relations in general
