**Scaleup of Chemical Processes** Attilio Bisio, Robert L. Kabel, 1985 The focus of this book is on the technical factors that are critical to the design and startup of a commercial manufacturing facility

**Scale-up Methodology for Chemical Processes** Jean-Paul Euzen, Pierre Trambouze, Jean-Pierre Wauquier, 1993 Having gained considerable experience in process development at the Institut Français du Pétrole the authors present a design framework a review of the available means of investigation and several examples illustrating their methodology of industrial process scale up The salient feature of the book is the fact that it addresses a subject which is vital in view of its economic repercussions yet relatively unknown in technical and scientific circles due to the confidentiality surrounding it Contents 1 Main guidelines of the methodology 2 Various types of model 3 Pilot plants and mock ups 4 Experimental techniques 5 Applications to industrial process development 6 Conclusions References Index

**Scale-up in Chemical Engineering** Marko Zlokarnik, 2006-08-21 Covering the important task of the scale up of processes from the laboratory to the production scale this easily comprehensible and transparent book is divided into two sections The first part details the theoretical principles introducing the subject for readers without a profound prior knowledge of mathematics It discusses the fundamentals of dimensional analysis the treatment of temperature dependent and rheological material values and scale up where model systems or not available or only partly similar All this is illustrated by 20 real world examples while 25 exercises plus solutions new to this edition practice and monitor learning The second part presents the individual basic operations and covers the fields of mechanical thermal and chemical process engineering with respect to dimensional analysis and scale up The rules for scale up are given and discussed for each operation Other additions to this second edition are dimensional analysis of pelleting processes and a historical overview of dimensional analysis and modeling while all the chapters have been updated to take the latest literature into account Written by a specialist with more than 40 years of experience in the industry this book is specifically aimed at students as well as practicing engineers chemists and process engineers already working in the field

Pilot Plants, Models, and Scale-up Methods in Chemical Engineering Robert Edgeworth Johnstone, Meredith Wooldridge Thring, 1957

**Dimensional Analysis and Scale-up in Chemical Engineering** Marko Zlokarnik, 2012-12-06 Contemporary Chemical Process Engineers face complex design and research problems Temperature dependent physical properties and non Newtonian flow behavior of substances in a process cannot be predicted by numerical mathematics Scaling up equipment for processing can often only be done with partial similarity methods Standard textbooks often neglect topics like dimensional analysis theory of similarity and scale up This book fills this gap It is aimed both at university students and the process engineer It presents dimensional analysis very comprehensively with illustrative examples of mechanical thermal and chemical processes

**Scale-Up in Education** Barbara L. Schneider, Sarah-Kathryn McDonald, 2007 Scale Up in Education Volume 1 Ideas in Principle examines the challenges of scaling up from a multidisciplinary perspective It brings

*Scale-Up Processes* Jamal Chaouki, Rahmat Sotudeh-Gharebagh, 2021-09-20 Common scale up methods are conventional where the blind piloting is essential This imposes huge investment and leads to failures mostly in solid processing However the limitations of resources current shortcomings short time to market demand are forced companies to minimize piloting With these situations in mind current digitalization outlook and computational facilities we proposed and developed a novel iterative scale up method with case studies which highly expedites the process innovation through the following key sequences

Chemical Projects Scale Up Joe M. Bonem, 2018-05-31 *Chemical Projects Scale Up How to Go from Laboratory to Commercial* covers the chemical engineering steps necessary for taking a laboratory development into the commercial world The book includes the problems associated with scale up equipment sizing considerations thermal characteristics associated with scale up safety areas to consider recycling considerations operability reviews and economic viability In addition to the process design aspects of commercializing the laboratory development consideration is given to the utilization of a development in an existing plant Explains how heat removal for exothermic reactions can be scaled up Outlines how a reactor can be sized from batch kinetic data Discusses how the plant performance of a new catalyst can be evaluated Presents how the economics of a new product process can be developed Discusses the necessary evaluation of recycling in commercial plants

*Second International Conference on Chemical Engineering Education* D.C. Freshwater, R.M. Blunden, J.R. Flower, 2013-09-11 *Second International Conference on Chemical Engineering Education* presents the situation in chemical engineering education in Germany Hungary Spain Japan and in the United States This book depicts an awareness of the problems of professional education together with a wide spectrum of opinions on their solution Organized into 39 chapters this book begins with an overview of the actual situation of chemical engineering education program in Spain This text then examines the detailed formalities of chemical engineering in secondary schools Other chapters consider the change in chemical engineering education in Japan due to the change of chemical industries as well as by a great change of students attitude This book discusses as well the curriculum proposal for the education of undergraduate and graduate levels as well as foreign students education The final chapter reviews the European situation of chemical engineering education system

This book is a valuable resource for teachers and students of chemical engineering **Scaleup of Chemical Processes** Attilio Bisio, Robert L. **Industries** Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process, storage, or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha to name but a few. The field of Loss Prevention is and continues to be of supreme importance to countless companies, municipalities, and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these and many other hazards. It could without exaggeration be referred to as the bible for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years it has been the most complete collection of information on the theory, practice, design, elements, equipment, regulations, and laws covering the field of process safety. An entire library of alternative books and cross-referencing systems would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers, and managers can be found in this all-encompassing reference. Instead, Frank Lees' world-renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field. Sam Mannan is professor of chemical engineering at Texas A&M. Principles, practice, codes, standards, data, and references needed by those practicing in the field      *Chemical Engineering Education*, 1988      *Stirring* Marko Zlokarnik, 2008-07-11 *Stirring* is one of the most important operations in process technology. No chemical exists that has not been submitted to a mixing process during its synthesis. Furthermore, stirring is important for the pharmaceutical and food industries too. The most important mixing operations are applied to homogenize miscible liquids to intensify the heat transfer between a liquid and

the heat exchanger and to perform mass transfer in multiphase systems to whirl up solid particles in fluids and to disperse immiscible liquids This book discusses in detail the above listed operations taking into consideration also different rheological behaviour of the system treated Newtonian and non Newtonian For each stirring task reliable scale up rules are presented In addition mixing in pipes is discussed in great detail Since there are so many aspects it is almost impossible for the user to get and keep an overview Therefore this book presents more than 730 references and covers publications until the end of the year 2000 for everybody who needs to know more details

#### **Food Processing Operations and Scale-up**
