Scented Ape The Biology And Culture Of Human Odour:

The Scented Ape David Michael Stoddart,1990-11-29 Both men and women devote time and effort to removing natural body odour and replacing it with sexual attractant odours derived from plants and animals we seem to need to smell of something other than people Yet of all the apes we are the most richly endowed with scent producing glands This book examines the sense of smell in humans comparing it with the known functions of the same sense in other animals Odorous cues play a role in sexual physiology and behaviour in animals and there are claims that odour can play the same role in humans The place of odours and scents in aesthetics and in psychoanalysis serves to illustrate the link between the emotional centres and the brain The book presents arguments to explain the way in which our ancestral past has given rise to our modern day olfactory enigmas The material is presented with as much explanation of the technical detail as possible to make the book accessible to a wide readership *The Scented Ape* David Michael Stoddart,1990 *Oxford Handbook of Evolutionary Psychology* Robin Ian MacDonald Dunbar,Louise Barrett,2007 The Oxford Handbook of Evolutionary Psychology is the definitive comprehensive and authoritative text on this burgeoning field With contributions from over fifty experts in the field the range and depth of coverage is unequalled It will be an essential resource for students and researchers in psychology *Evolutionary Psychology* Christopher Badcock,2013-05-31 Evolutionary Psychology A Critical Introduction According to evolutionary biologists we are the minders of our genes But as Christopher Badcock points out in this book it is only recently that evolutionists have realized that minders need minds and that evolution needs psychology to fill the yawning gap between genes and behaviour Evolutionary Psychology assumes no prior knowledge of the subject and concentrates on the fundamental issues raised by the application of modern Darwinism to psychology Basic concepts of evolution are explained carefully so that the reader has a sound grasp of them before their often controversial application to psychology is discussed The approach is a critical one and the author does not hide the many difficulties that evolutionary psychology raises Examples include the strange neglect of Darwin s own writings on psychology and the fact that no existing theory has succeeded in explaining why the human brain evolved in the first place The book is the first to give a non technical account of remarkable new findings about the roles that conflicting genes play in building different parts of the brain It is also the first to consider the consequences of this for controversies like those over nature nurture IQ brain lateralization and consciousness Evolutionary Psychology is based on many years experience of teaching evolution and psychology to social science students and is intended for all who wish to get to grips with the basic issues of one of the most exciting and rapidly growing areas of modern science **Communicating** Ruth Finnegan,2005-06-29 In *Communicating* the anthropologist Ruth Finnegan considers the many and varied modes through which we humans communicate and the multisensory resources we draw on The book uncovers the amazing array of sounds sights smells gestures looks movements touches and material objects which humans use so creatively to interconnect both nearby and across space and time resources

consistently underestimated in those western ideologies that prioritise rationality and referential language

Dilthey's Dream Derek Freeman, 2017-04-26 With great eloquence Derek Freeman takes the reader on an intellectual journey through the complexities of philosophical anthropology Even while the controversial Nature Nurture debate raged Freeman contended that the crucial fact that humans had the capacity to make choices was both intrinsic to our biology and basic to the very formation of cultures Thus the scene was set for his widely publicised criticism of Margaret Mead's book *Coming of Age in Samoa* Publishing her research in 1926 Mead concluded that all human behaviour was the result of social conditioning Freeman refuted this assumption in 1983 urging closer interactions between the biological sciences and cultural studies to bridge the ever widening chasm threatening all studies of humankind Dilthey's Dream is an engagingly powerful set of essays depicting the depth of one man's thinking on issues which consumed a lifetime

Adam's Nose, And The Making Of Humankind Michael Stoddart, 2015-02-12 This book is about the evolution of the sense of smell from its bacterial origin 3.4 billion years ago to today's modern sophisticated humans with an insatiable appetite for perfumes and fragrances It explains how smell works and how animals sense the environment The relationship between sex and smell drives much of animal behaviour and the significance of the human loss of the vomeronasal organ a part of the sense of smell in animals that responds to sex smells is identified as a seminal event in the making of humankind Humans are far more than animals however and Adam's Nose explores incense and perfumes as well as the odour imagery in art literature and poetry It is written for readers interested in what makes us human and does not presuppose a high level of scientific understanding The text is comprehensive and provides key references to the relevant scientific literature The book will appeal to scientists and students in a range of biological disciplines including human evolution anthropology olfactory communication animal behaviour perfumery and aromatherapy

Intercultural Communication James W. Neuliep, 2016-12-27 In the fully updated Seventh Edition of *Intercultural Communication: A Contextual Approach* bestselling author James W. Neuliep provides a clear contextual model visually depicted by a series of concentric circles for examining communication within cultural microcultural environmental sociorelational and perceptual contexts Students are first introduced to the broadest context the cultural component of the model and progress chapter by chapter through the model to the most specific dimensions of communication Each chapter focuses on one context and explores the combination of factors within that context including setting situation and circumstances Highlighting values ethnicity physical geography and attitudes the book examines means of interaction including body language eye contact and exchange of words as well as the stages of relationships cross cultural management intercultural conflict and culture shock

Living machines Tony J. Prescott, Nathan Lepora, Paul F. M. J. Verschure, 2018-04-19 Contemporary research in science and

engineering is seeking to harness the versatility and sustainability of living organisms. By exploiting natural principles, researchers hope to create new kinds of technology that are self-repairing, adaptable, and robust, and to invent a new class of machines that are perceptive, social, emotional, perhaps even conscious. This is the realm of the living machine. Living machines can be divided into two types: biomimetic systems that harness the principles discovered in nature and embody them in new artifacts, and biohybrid systems in which biological entities are coupled with synthetic ones. *Living Machines: A handbook of research in biomimetic and biohybrid systems* surveys this flourishing area of research, capturing the current state of play and pointing to the opportunities ahead. Promising areas in biomimetics include self-organization, biologically inspired active materials, self-assembly, and self-repair; learning, memory, control architectures, and self-regulation; locomotion in air, on land, or in water; perception, cognition, control, and communication. Drawing on these advances, the potential of biomimetics is revealed in devices that can harvest energy, grow, or reproduce, and in animal-like robots that range from synthetic slime molds to artificial fish to humanoids. Biohybrid systems is a relatively new field with exciting and largely unknown potential, but one that is likely to shape the future of humanity. This book surveys progress towards new kinds of biohybrid, such as robots that merge electronic neurons with biological tissue, micro-scale machines made from living cells, prosthetic limbs with a sense of touch, and brain-machine interfaces that allow robotic devices to be controlled by human thought. The handbook concludes by exploring some of the impacts that living machine technologies could have on both society and the individual, exploring questions about how we will see and understand ourselves in a world in which the line between the natural and the artificial is increasingly blurred. With contributions from leading researchers from science, engineering, and the humanities, this handbook will be of broad interest to undergraduate and postgraduate students. Researchers in the areas of computational modeling and engineering, including artificial intelligence, machine learning, artificial life, biorobotics, neurorobotics, and human-machine interfaces, will find *Living Machines* an invaluable resource.

Religion and Drama in Early Modern England Elizabeth Williamson, 2016-04-08. Offering fuller understandings of both dramatic representations and the complexities of religious culture, this collection reveals the ways in which religion and performance were inextricably linked in early modern England. Its readings extend beyond the interpretation of straightforward religious allusions and suggest new avenues for theorizing the dynamic relationship between religious representations and dramatic ones. By addressing the particular ways in which commercial drama adapted the sensory aspects of religious experience to its own symbolic systems, the volume enacts a methodological shift towards a more nuanced semiotics of theatrical performance. Covering plays by a wide range of dramatists, including Shakespeare, individual essays explore the material conditions of performance, the intricate resonances between dramatic performance and religious ceremonies, and the multiple valences of religious references in early modern plays. Additionally, *Religion and Drama in Early Modern England* reveals the theater's broad interpretation of post-Reformation Christian practice, as well as its engagement

Vasey, 2006-07-27 Behavioural observations from both the field and captivity indicate that same sex sexual interactions are widespread throughout the animal kingdom and occur quite frequently in certain non human species Proximate studies of these phenomena have yielded important insights into genetic hormonal and neural correlates In contrast there has been a relative paucity of research on the evolutionary aspects Homosexual Behaviour in Animals seeks to readdress this imbalance by exploring animal same sex sexual behaviour from an evolutionary perspective Contributions focus on animals that routinely engage in homosexual behaviour and include birds dolphin deer bison and cats as well as monkey and apes such as macaques gorillas and bonobos A final chapter looks at human primates This book will appeal to graduate students and researchers in evolutionary biology biological anthropology zoology evolutionary psychology animal behaviour and anyone interested in the current state of knowledge in this area of behavioural studies *Interpreting and Explaining Transcendence* Robert A. Yelle, Jenny Ponzio, 2021-09-07 In this volume an interdisciplinary group of scholars uses history sociology anthropology and semiotics to approach Transcendence as a human phenomenon and shows the unavoidability of thinking with and through the Beyond Religious experience has often been defined as an encounter with a transcendent God Yet humans arguably have always tried to get outside or beyond themselves and society The drive to exceed some limit or condition of finitude is an enduring aspect of culture even in a disenchanted society that may have cut off most paths of access to the Beyond The contributors to this volume demonstrate the humanity of Transcendence in various ways as an effort to get beyond our crass physical materiality as spiritual entrepreneurship as the ecstasy of rituals of possession and as a literary aesthetic and semiotic event These efforts build from a shared conviction that Transcendence is thoroughly human and accordingly avoid purely confessional and parochial approaches while taking seriously the various claims and behavioral expressions of traditions in which Transcendence has been understood in theological terms The Domesticated Penis

Brinkworth, Kate Pechenkina, 2013-08-30 The immune systems of human and non human primates have diverged over time such that some species differ considerably in their susceptibility symptoms and survival of particular infectious diseases Variation in primate immunity is such that major human pathogens such as immunodeficiency viruses herpesviruses and malaria inducing species of Plasmodium elicit striking differences in immune response between closely related species and within primate populations These differences in immunity are the outcome of complex evolutionary processes that include interactions between the host its pathogens and symbiont commensal organisms The success of some pathogens in establishing persistent infections in humans and other primates has been determined not just by the molecular evolution of the pathogen and its interactions with the host but also by the evolution of primate behavior and ecology microflora immune factors and the evolution of other biological systems To

explore how interactions between primates and their pathogens have shaped their mutual molecular evolution Primates Pathogens and Evolution brings together research that explores comparative primate immune function the emergence of major and neglected primate diseases primate microorganism molecular interactions and related topics This book will be of interest to anyone curious as to why infectious diseases manifest differently in humans and their closest relatives It will be of particular interest to scholars specializing in human and non human primate evolution epidemiology and immunology and disease ecology Primates Pathogens and Evolution offers an overview and discussion of current findings on differences in the molecular mechanics of primate immune response as well as on pathogen mediated primate evolution and human and non human primate health
