Scheduling and Automatic Parallelization Alain Darte, Yves. Robert, Frederic Vivien, 2012-12-06 I Unidimensional Problems 1 Scheduling DAGs without Communications 2 Scheduling DAGs with Communications 3 Cyclic Scheduling II Multidimensional Problems 4 Systems of Uniform Recurrence Equations 5 Parallelism Detection in Nested Loops Job Scheduling Strategies for Parallel Processing Walfredo Cirne, Narayan Desai, 2015-02-13 This book constitutes the thoroughly refereed post conference proceedings of the 18th International Workshop on Job Scheduling Strategies for Parallel Processing JSSPP 2014 held in Phoenix AZ USA in May 2014 The 9 revised full papers presented were carefully reviewed and selected from 24 submissions The papers cover the following topics single core parallelism moving to distributed memory larger scale systems scheduling fairness and parallel job scheduling **Task Scheduling for Multi-core and Parallel Architectures** Quan Chen, Minyi Guo, 2017-11-23 This book presents task scheduling techniques for emerging complex parallel architectures including heterogeneous multi core architectures warehouse scale datacenters and distributed big data processing systems The demand for high computational capacity has led to the growing popularity of multicore processors which have become the mainstream in both the research and real world settings Yet to date there is no book exploring the current task scheduling techniques for the emerging complex parallel architectures Addressing this gap the book discusses state of the art task scheduling techniques that are optimized for different architectures and which can be directly applied in real parallel systems Further the book provides an overview of the latest advances in task scheduling policies in parallel architectures and will help readers understand and overcome current and emerging issues in this field *Scheduling for Parallel Processing* Maciej Drozdowski, 2010-03-14 Overview and Goals This book is dedicated to scheduling for parallel processing Presenting a research eld as broad as this one poses considerable dif culties Scheduling for parallel computing is an interdisciplinary subject joining many elds of science and te nology Thus to understand the scheduling problems and the methods of solving them it is necessary to know the limitations in related areas Another dif culty is that the subject of scheduling parallel computations is immense Even simple search in bibliographical databases reveals thousands of publications on this topic The versity in understanding scheduling problems is so great that it seems impossible to juxtapose them in one scheduling taxonomy Therefore most of the papers on scheduling for parallel processing refer to one scheduling problem resulting from one way of perceiving the reality Only a few publications attempt to arrange this eld of knowledge systematically In this book we will follow two guidelines One guideline is a distinction tween scheduling models which comprise a set of scheduling problems solved by dedicated algorithms Thus the aim of this book is to present scheduling models for parallel processing problems de ned on the grounds of certain scheduling models and algorithms solving the scheduling problems Most of the scheduling problems are combinatorial in nature Therefore the second guideline is the methodology of computational complexity theory In this book we present four examples of scheduling models We will go deep into

the models problems and algorithms so that after acquiring some understanding of them we will attempt to draw conclusions on their mutual relationships
