Mammals of Africa Jonathan Kingdon, David Happold, Thomas Butynski, Michael Hoffmann, Meredith Happold, Jan Kalina, 2013-05-23 WINNER OF THE 2014 DARTMOUTH MEDAL AWARDED BY THE AMERICAN LIBRARY ASSOCIATION. Mammals of Africa represents a high water mark not just in mammalogy but in scientific publishing overall. Magnificent. Tim Flannery, Macquarie University, Sydney. Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal. This is the first time that such extensive coverage has ever been attempted, and the volumes incorporate the very latest information and detailed discussion of the morphology, distribution, biology, and evolution, including reference to fossil and molecular data of Africa's mammals. With 1,160 species and 16 orders, Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format with detailed profiles of every species and higher taxa. The series includes some 660 colour illustrations by Jonathan Kingdon, and his many drawings highlight details of morphology and behaviour of the species concerned. Diagrams, schematic details, and line drawings of skulls and jaws are by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Extensive references alert readers to more detailed information.

Colonizing Animals Jonathan Saha, 2021-11-11 Animals were vital to the British colonization of Myanmar. In this pathbreaking history of British imperialism in Myanmar from the early nineteenth century to 1942, Jonathan Saha argues that animals were impacted and transformed by colonial subjugation. By examining the writings of Burmese nationalists and the experiences of subaltern groups, he also shows how animals were mobilized by Burmese anticolonial activists in opposition to imperial rule. In demonstrating how animals such as elephants, crocodiles, and rats were important actors, never fully under the control of humans, Saha uncovers a history of how British colonialism transformed ecologies and fostered new relationships with animals in Myanmar. *Colonizing Animals* introduces the reader to an innovative historical methodology for exploring interspecies relationships in the imperial past, using innovative concepts for studying interspecies empires that draw on postcolonial theory and critical animal studies.

African Insectivora and Elephant-shrews Martin E. Nicoll, Galen B. Rathbun, IUCN/SSC Insectivore, Tree-Shrew, and Elephant-Shrew Specialist Group, 1990 The three mammalian orders Insectivora, Scandentia and Macroscelidea all comprise small terrestrial mammals that are primarily adapted to an insectivorous diet. In general, we know very little about the threats facing the African Insectivora and elephant shrews. However, the little we know suggests that they tend to be at risk from habitat modification rather than from direct exploitation of the species themselves. Both on the African mainland and on Madagascar, there are several centres of exceptional diversity and endemism for these species. These centres are identified in this Action Plan and the principal conservation priority is the maintenance of sufficient areas of suitable habitat in these centres.
