Essential Speech and Language Technology for Dutch Peter Spyns, Jan Odijk, 2013-02-26. The book provides an overview of more than a decade of joint R & D efforts in the Low Countries on HLT for Dutch. It not only presents the state of the art of HLT for Dutch in the areas covered but even more importantly a description of the resources, data and tools for Dutch that have been created and are now available for both academia and industry worldwide. The contributions cover many areas of human language technology for Dutch: corpus collection including IPR issues and building in particular one corpus aiming at a collection of 500M word tokens; lexicology; anaphora resolution; a semantic network; parsing technology; speech recognition; machine translation; text summaries generation; web mining; information extraction; and text to speech to name the most important ones. The book also shows how a medium sized language community spanning two territories can create a digital language infrastructure: resources, tools etc. as a basis for subsequent R & D. At the same time it bundles contributions of almost all the HLT research groups in Flanders and the Netherlands hence offers a view of their recent research activities. Targeted readers are mainly researchers in human language technology in particular those focusing on Dutch. It concerns researchers active in larger networks such as the CLARIN, META, NET, FLareNet and participating in conferences such as ACL, EACL, NAACL, COLING, RANLP, CICling, LREC, CLIN and DIR both in the Low Countries, InterSpeech, ASRU, ICASSP, ISCA, EUSIPCO, CLEF, TREC etc. In addition, some chapters are interesting for human language technology policy makers and even for science policy makers in general.
