Fodder Crops and Amenity Grasses Beat Boller,Ulrich K. Posselt,Fabio Veronesi,2010-01-14 Grassland farming in Europe was already established during the settlement of the rst farmers together with their domesticated animals after the last ice age Since then grassland provides the forage basis to feed ruminant animals for the p duction of meat and milk Depending on the ecological conditions and intensity of usage various plant communities with different species developed displaying a rich biodiversity With the introduction of improved crop rotations

at the end of the 16th century grasses and legumes were also grown to an important extent as forage crops on arable land. In the last decades the importance of amenity grasses increased markedly due to the demand of the society for new usages like landscape protection. Around 1900 interested farmers and academics identified the need for grassland improvement through systematic selection and seed production. This marks the beginning of breeding and research in companies but also at universities and specialized research institutes. Plant collection started with many of the species that are still of importance today. The collected materials were grouped according to the intended use and some type of phenotypic selection was applied. Seed multiplication of such populations was performed in pure stands and the harvested seed was marketed. Although the vegetative biomass and its quality are of utmost importance in forage crop breeding it is the seed yield potential which determines the commercial success of a new variety.

Individual chapters in this book deal with clay mineralogy the bench marking of cricket pitch soils pitch soil chemical properties pitch soil water pitch turf grass pitch soil organic matter integrated rolling management soil structure and compressibility. This is an effort to decipher the impact of each and every major and minor component of pitch soil which controls the pitch behaviour either in large or small magnitudes but acts as a critical factor in defining and shaping the pitch behaviour as a whole. Several real life examples pitch interviews scenarios and case studies as felt and observed by the curator first author during the preparation of various international national and board matches or during the construction and renovation of new wickets have been included in each and every relevant chapter so as to analyse interpret comprehend and justify the theoretical science with the existing practises involved in pitch construction preparation or judging the complex nature of pitch behaviour. Based on findings through the DBMS PBAI and PQS of cricket pitch profiles various innovative and simple methods of analysing comprehending and forecasting pitch behaviour have been devised that will enable one to judge and comprehend the complex pitch behaviour in simple ways.
