Volumes CCIS 107 and LNCS 6382 constitute the proceedings of the 5th International Symposium ISICA 2010 held in Wuhan, China, in October 2010. The papers are presented in sections on ANT colony and particle swarm optimization, differential evolution, distributed computing, genetic algorithms, multi-agent systems, multi-objective and dynamic optimization, robot intelligence, statistic learning, and system design The Nature of Physical Computation Oron Shagrir, 2022. Computing systems are ubiquitous in contemporary life. Even the brain is thought to be a computing system of sorts. But what does it mean to say that a given organ or system computes? What is it about laptops, smartphones, and nervous systems that they are deemed to compute, and why does it seldom occur to us to describe stomachs, hurricanes, rocks, or chairs that way? These questions are key to laying the conceptual foundations of computational sciences, including computer science and engineering and the cognitive and neural sciences. Oron Shagrir here provides an extended argument for the semantic view of computation, which states that semantic properties are involved in the nature of computing systems. The first part of the book provides general background. Although different in scope, these chapters have a common theme: namely, that the linkage between the mathematical theory of computability and the notion of physical computation is weak. The second part of the book reviews existing non-semantic accounts of physical computation. Shagrir analyzes three influential accounts in greater depth and argues that none of these accounts is satisfactory, but each of them highlights certain key features of physical computation that he eventually adopts in his own semantic account of physical computation: a view that rests on a phenomenon known as simultaneous implementation or indeterminacy of computation. Shagrir completes the characterization of his account of computation and highlights the distinctive feature of computational explanations.
