

"If we've learned any lessons during the past few decades, perhaps the most important is that preservation of our environment is not a partisan challenge; it's common sense. Our physical health, our social happiness, and our economic well-being will be sustained only by all of us working in partnership as thoughtful, effective stewards of our natural resources."

Presidents and the American Environment Otis L. Graham, Jr., 2015-06-23 In 1891 Benjamin Harrison the first president engaged in conservation had to have this new area of public policy explained to him by members of the Boone and Crockett Club This didn t take long as he was only asked to sign a few papers setting aside federal timberland But from such small moments great social movements grow and the course of natural resource protection policy through 22 presidents has altered Americans relationship to the natural world in then almost unimaginable ways *Presidents and the American Environment* charts this course Exploring the ways in which every president from Harrison to Obama has engaged the expanding agenda of the Nature protection impulse the book offers a clear close up view of the shifting and nation shaping mosaic of both green and brown policy directions over more than a century While the history of conservation generally focuses on the work of intellectuals such as Muir Leopold and Carson such efforts could only succeed or fail on a large scale with the involvement of the government and it is this side of the story that *Presidents and the American Environment* tells On the one hand we find a ready environmental engagement as in Theodore Roosevelt s establishment of Pelican Island bird refuge upon being informed that the Constitution did not explicitly forbid it On the other hand we have leaders like Calvin Coolidge playing hide and seek games in the Oval Office while ignoring reports of coastal industrial pollution The book moves from early cautious sponsors of the idea of preserving public lands to crusaders like Theodore Roosevelt from the environmental implications of the New Deal to the politics of pollution in the boom times of the forties and fifties from the emergence of environmentalism to recent presidential detractors of the cause From Harrison s act which established the American system of National Forests to Barack Obama s efforts on curbing climate change presidents have mattered as they resisted or used the ever changing tools and objectives of environmentalism In fact with a near even split between browns and greens over those 22 administrations the role of president has often been decisive How and how much distinguished historian Otis L. Graham Jr describes in full for the first time in this important contribution to American environmental history **Medicaid** John Holahan, Joel W. Kowert, 2012-02-01 The danger of groupthink is now standard fare in leadership training programs and a widely accepted explanation among political scientists for policy making fiascoes Efforts to avoid groupthink however can lead to an even more serious problem deadlock Groupthink or Deadlock explores these dual problems in the Eisenhower and Reagan administrations and demonstrates how both presidents were capable of learning and consequently changing their policies sometimes dramatically but at the same time doing so in characteristically different ways Kowert points to the need for leaders to organize their staff in a way that fits their learning and leadership style and allows them to negotiate a path between groupthink and deadlock *The Environmental Presidency* Dennis L. Soden, 1999-09-16 Examines how the modern presidency has responded to environmental concerns **Exploring the Domain of Accident Law** Don DeWees, David Duff, Michael Trebilcock, 1996-01-04 In the mid 1980s there was a crisis in the

availability affordability and adequacy of liability insurance in the United States and Canada Mass tort claims such as the asbestos DES and Agent Orange litigation generated widespread public attention and the tort system came to assume a heightened prominence in American life While some scholars debate whether or not any such crisis still exists there has been an increasing political judicial and academic questioning of the goals and future of the tort system Exploring the Domain of Tort Law reviews the evidence on the efficacy of the tort system and its alternatives By looking at empirical evidence in five major categories of accidents automobile medical malpractice product related accidents environmental injuries and workplace injuries the authors evaluate the degree to which the tort system conforms to three normative goals deterrence corrective justice and distributive justice In each case the authors review the deterrence and compensatory properties of the tort system and then review parallel bodies of evidence on regulatory penal and compensatory alternatives Most of the academic literature on the tort system has traditionally been doctrinal or in recent years highly theoretical Very little of this literature provides an in depth consideration of how the system works and whether or not there are any feasible alternatives Exploring the Domain of Tort Law contributes valuable new evidence to the tort law reform debate It will be of interest to academic lawyers and economists policy analysts policy professionals in government and research organizations and all those affected by tort law reform
