Natural Selection Of Populations And Communities:

The Natural Selection of Populations and Communities David Sloan Wilson, 1980 **Carbon Dioxide, Populations, and Communities** Fakhri A. Bazzaz, 1996-07-17 In past decades and in association with a continuing global industrial development the global atmospheric concentration of carbon dioxide has been rising Among the many predictions made concerning this disturbing trend is global warming sufficient to melt polar ice caps thereby dramatically altering existing shorelines This book will help fill an obvious gap in the carbon dioxide debate by substituting data for speculation Includes contributions from leading authorities around the world Serves as a companion to Carbon Dioxide and Terrestrial Ecosystems The first book of its kind to explore evolutionary responses of both populations and communities to elevated carbon dioxide

The Statistics of Natural Selection on Animal Populations Brian F. Manly, 2013-03-09 In the concluding chapter of his famous book on the theory of evolution by natural selection Charles Darwin 1859 remarked that When the views entertained in this volume on the origin of species or when analogous views are generally admitted we can dimly foresee that there will be a considerable revolution in natural history This proved of course to be completely correct At present there is a great divergence of opinion about the general importance of natural selection in the evolutionary process Nevertheless biologists are on the whole united in their acceptance of the potential power of selection in changing populations Given this situation it is not surprising to find that many attempts to detect the effects of natural selection have been made since the time of Darwin This area of study has been called ecological genetics It involves the collection of data of various kinds and in many cases the development of special methods for analysing these data This book is a summary of methods for data analysis concentrating on those that are applicable to animal populations particularly wild populations

Population-Level Ecological Risk Assessment Lawrence W. Barnhouse, Wayne R. Munns Jr., Mary T. Sorensen, 2007-09-25 Most ecological risk assessments consider the risk to individual organisms or organism level attributes From a management perspective however risks to population level attributes and processes are often more relevant Despite many published calls for population risk assessment and the abundance of available scientific research and technical tool

Models and Approaches In Ecology D. L. DeAngelis, 2018-01-18 Until fairly recently populations were handled as homogenized averages which made modeling feasible but which ignored the essential fact that in any population there is a great variety of individuals of different ages sizes and degrees of fitness Recently because of the increased availability of affordable computer power approaches have been developed which are able to recognize individual differences Individual based models are of great use in the areas of aquatic ecology terrestrial ecology landscape or physiological ecology terrestrial ecology landscape or physiological ecology and agriculture This book discusses which biological problems individual based models can solve as well as the models inherent limitations It explores likely future directions of theoretical development in these models as well as currently feasible management applications and the best mathematical approaches and computer languages to use The book also details specific applications to theory and management **Ecological**

Restoration in the Midwest Christian Lenhart, Peter C. Smiley, Jr., 2018-06-01 Most people do not realize it but the Midwest has been at the forefront of ecological restoration longer than perhaps any other region in the United States dating back to the 1930s Because of its industrial history agricultural productivity and natural features such as the Great Lakes the Midwest has always faced a unique set of ecological challenges Focusing on six cutting edge case studies that highlight thirty restoration efforts and research sites throughout the region Iowa Indiana Illinois Wisconsin Michigan Minnesota and Ohio editors Christian Lenhart and Peter Rocky Smiley Jr bring together a group of scholars and practitioners to show how

midwestern restoration efforts have developed as well as where they are headed Whether cleaning up contamination from auto plants in Ohio or restoring native prairie grasses along the Iowa highway the contributors uncover a vast network of interested citizens and volunteer groups committed to preserving the region s environment This study intended for researchers students and practitioners also provides an updated synthesis of restoration theory and practice and pinpoints emerging issues of importance in the Midwest such as climate change and the increase in invasive species it will bring to the region Though focusing exclusively on the Midwest the contributors demonstrate how these case studies apply to restoration efforts across the globe Contributors Luther Aadland David P Benson Andrew F Casper Hua Chen Joe DiMisa Steve Glass Heath M Hagy John A Harrington Neil Haugerud Constance Hausman Michael J Lemke Christian Lenhart Jen Lyndall Dan Shaw John A Shuey Peter C Smiley Jr Daryl Smith

Economics, Natural-Resource Scarcity and Development (Routledge Revivals) Edward B Barbier, 2013-06-26 Global warming is an increasing problem tropical forests are being wiped out and major upper watersheds are being degraded Using insights provided by environmentalism ecology and thermo dynamics this book first published in 1989 outlines an economic approach to the use of natural resources and particularly to the problem of environmental degradation Edward Barbier reviews and critiques the long past of environmental and resource economics and then goes on to elaborate an economics which allows us to develop alternative strategies for dealing with the problems faced With examples drawn from Latin America and Indonesia he not only develops a major theoretical advance but shows how it can be applied Barbier s work is an important and relevant contribution to the

discussion surrounding the economics of environmental sustainability **Life Out of Balance** Joel B. Hagen, 2021-04-13
Traces historical developments in scientific conceptions of physiology ecology behavior and evolutionary biology during the mid twentieth century Life Out of Balance focuses on a period in history when new ideas of self regulation adaptation and fitness became central to a variety of biological disciplines During the decades surrounding World War II these ideas developed in several quite different contexts and led to greater debates about the merits of such models as applied to larger systems including society at large Particularly in its later cybernetic form homeostasis seemed to provide new ways of discussing balance and regulation that avoided discredited approaches of earlier champions of vitalism and mechanism It provided a common perspective and terminology for discussing self regulating systems whether biological mechanical or social Although enormously fruitful and influential homeostatic perspectives also generated numerous controversies when critics questioned the degree to which biological systems are characterized by balance and self regulation Resolving these controversies continues to be a challenge in modern biology If natural selection constitutes the first law of biology scientists who champion homeostasis as a theoretical model claim that it is a second law equally important and closely related to the first Such claims notwithstanding homeostasis has generated a series of controversies since it was formalized by Walter Cannon in the late 1920s Critics contended that Cannon took a too optimistic view of life not only ignoring pathological deviations from normality but also failing to adequately explain the ability of living things to respond adaptively to environmental challenges Underlying these controversies was the unresolved problem of integrating physiology and other areas of functional biology with the emerging evolutionary synthesis of Mendelian genetics and Darwinian natural selection The physiological idea of homeostasis as the adaptive fit between the organism and its environment and the Darwinian idea of adaptation and fitness in terms of reproductive success might seem to be complementary in an unproblematic way but historically they have had an uneasy relationship **Revise A2 Biology for AQA B** Graham Read, Ray Skwierczynski, 2005-03-30 The revision guides contain exactly what students need to know for the AQA B exams with exam style questions tips on common pitfalls and lots of sound advice **Ecotoxicology** Michael C. Newman, William H. Clements, 2007-12-13 A unique presentation that unifies the field this book brings together concepts and information about contaminant effects at all levels of the biological hierarchy Beginning at the biomolecular level this book builds progressively toward a discussion of effects to the global biosphere Emphasizing ecological components and fundamental paradigms the authors strike a balance between the presentation of details relevant at each level and the integration of phenomena and processes among levels A milestone in the field the book is suitable for graduate courses as well as a reference for professionals in the field *The Journal of Social Forces* , 1924 **Biological Reviews of the Cambridge Philosophical Society** Cambridge Philosophical Society, 1925 Proceedings of the Cambridge Philosophical Society Cambridge Philosophical Society, 1925 **An Introduction to the Study of Society** Frank Hamilton Hankins, 1928 na ,
