**Nature and the City** Gene Desfor, Roger Keil, 2004-09 Pollution of air soil and waterways has become a primary concern of urban environmental policy making and over the past two decades there has emerged a new era of urban policy that links development with ecological issues based on the notion that both nature and the economy can be enhanced through technological changes to production and consumption systems This book takes a new look at this application of ecological modernization to contemporary urban political ecological struggles Considering policy processes around land use in urban watersheds and pollution of air and soil in two disparate North American global cities it criticizes the dominant belief in the power of markets and experts to regulate environments to everyone s benefit arguing instead that civil political action by local constituencies can influence the establishment of beneficial policies The book emphasizes subaltern environmental justice concerns as instrumental in shaping the policy process Looking back to the 1990s when ecological modernization began to emerge as a dominant approach to environmental policy and theory Desfor and Keil examine four case studies restoration of the Don River in Toronto cleanup of contaminated soil in Toronto regeneration of the Los Angeles River and air pollution reduction in Los Angeles In each case they show that local constituencies can develop political strategies that create alternatives to ecological modernization When environmental policies appear to have been produced through solely technical exercises they warn one must be suspicious about the removal of contention from the process In the face of economic and environmental processes that have been increasingly influenced by neo liberalism and globalization Desfor and Keil s analysis posits that continuing modernization of industrial capitalist societies entails a measure of deliberate change to societal relationships with nature in cities Their book shows that environmental policies are about much more than green capitalism or the technical mastery of problems they are about how future urban generations live their lives with sustainability and justice

*Ecological Urbanism: The Nature of the City* Susannah Hagan, 2014-09-15 *Ecological Urbanism* The Nature of the City asks the questions that are important inside

and outside the built environment professions what are climate change urbanisation and ecology doing to the theory and practice of urban design How does Ecological Urbanism figure in this change What is Ecological Urbanism In answer this book is neither definitive impossible when a subject is still in motion nor encyclopaedic equally impossible when so much has been written on almost every aspect of these essays Instead it seeks to rebalance the ecological narrative and its embryonic modes of practice with the narratives of urbanism and its older deeply embedded modes of practice It examines the implications for cities and the designers of cities now we are required to again address their metabolic as well as social and formal dimensions and it explores the extent to which environmental engineering and natural systems design can and should become drivers for the remaking of cities in the 21st century Above all it argues that sooner rather than later urbanism needs to become environmentally literate and environmental design needs to become culturally literate **Changing**

**Representations of Nature and the City** Gabriel N. Gee, Alison Vogelaar, 2018-07-04 The turn of the 1960s 70s characterized by the rapid acceleration of globalization prompted a radical transformation in the perception of urban and natural environments The urban revolution and related prospect of the total urbanisation of the planet in concert with rapid population growth and resource exploitation instigated a surge in environmental awareness and activism One implication of this moment is a growing recognition of the integration and interconnection of natural and urban entities The present collection is an interdisciplinary inquiry into the changing modes of representation of nature in the city beginning from the turn of the 1960s 70s Bringing together a number of different disciplinary approaches including architectural studies and aesthetics heritage studies and economics environmental science and communication the collection reflects upon the changing perception of socio natures in the context of increasing urban expansion and global interconnectedness as they are were manifest in specific representations Using cases studies from around the globe the collection offers a historical and theoretical understanding of a paradigmatic shift whose material and symbolic legacies are still accompanying us in the early 21st century City Safari Jenette Restivo, 2025-10-07

When a child walks down a city block they might see a natural wasteland A sea of gray with no signs of life A solitary sickly over pruned tree confined to a square of dirt penned in by concrete However what a child might not see are the precarious but sturdy squirrel nests above their heads at the tops of gnarled and crooked trees The perches of raptors on the tallest buildings Rookeries for pigeon chicks nestled on parking garage ceiling beams The white drippings under a tree cavity that give away an owl tucked inside Or the crevice in a rock wall leading to the cozy nook of a family of rodents In fact most cities are teeming with nature if you know where and how to look City Safari will teach middle grade readers just that It will equip children with the perfect tool for visualizing their city s natural side revealing a world of urban wildlife hidden in plain sight Part natural history guide part training manual and part hands on fieldwork guide City Safari will take readers on a quest through the wilds of their city leaving them with lifelong naturalist skills **Nature in a City Yard** Charles Montgomery Skinner, 1897 Nature City Babalis, Dimitra, 2022-12-30

Urban Jungle Ben Wilson, 2023-03-07 In this exhilarating look at cities past and future Ben Wilson proposes that in our world of rising seas and threatening weather the natural world may prove the city's savior Illuminating Wilson leaves readers with hope about the future of efforts to preserve the ecosystems that surround us as well as a new perspective that looks beyond the concrete and asphalt when walking along a city's streets Associated Press Since the beginning of civilization humans have built cities to wall nature out then glorified it in beloved but quite artificial parks In *Urban Jungle* Ben Wilson the author of *Metropolis* a seven thousand year history of cities that the Wall Street Journal called a towering achievement looks to the fraught relationship between nature and the city for clues to how the planet can survive in an age of climate crisis Whether it was the market farmers of Paris Germans in medieval forest cities or the Aztecs in the floating city of Tenochtitlan pre modern humans had an essential bond with nature But when the day came that water was piped in and food flown from distant fields that relationship was lost Today urban areas are the fastest growing habitat on Earth and in *Urban Jungle* Ben Wilson finds that we are at last acknowledging that human engineering is not enough to protect us from extremes of weather He takes us to places where efforts to rewild the city are under way to Los Angeles where the city's concrete river will run blue again to New York City where a bleak landfill will be a vast grassland preserve The pinnacle of this strategy will be Amsterdam a city that is its own ecosystem that makes no waste and produces its own energy In many cities Wilson finds nature is already thriving Koalas are settling in Brisbane wild boar may raid your picnic in Berlin Green canopies wildflowers wildlife the things that will help cities survive he notes also make people happy *Urban Jungle* offers the pleasures of history how backyard gardens spread exotic species all over the world how war produces biodiversity alongside a fantastic vision of the lush green cities of our future Climate change Ben Wilson believes is only the latest chapter in the dramatic human story of nature and the city
