**Nature Technology** Emile H. Ishida, Ryuzo Furukawa, 2013-12-19 The Great East Japan Earthquake which occurred on March 11 2011 reminded us that we were just one species within the great cycle of life on earth that we were allowed to survive only because of nature and that the idea that we were somehow able to conquer nature was simply an illusion Now more than ever it is time that we confront head on the change from the underground resources type of civilization to one with a new way of life and technology that embraces a

sense of nature To do so we must learn from nature the only sustainable society on earth and create technology that embraces such a view of nature We call such technology which cleverly revives nature s greatness Nature Technology Taking a casual glance at nature a nest of termites in the savanna region can be observed to maintain a steady temperature of 30 C despite the fact that the outside air temperature ranges from 50 C during the day to nearly 0 C at night There are countless numbers of open pores just several billionths of a meter nanometer wide in the earth of the nest which serve to regulate the temperature and humidity In fact all kinds of earth have these pores clay mineral with aggregated structures and air conditioners that require no electricity have been created by hardening this earth while preserving its structure a cooling floor or wall becomes the alternative to a conventional air conditioner This book provides many such examples of how Nature Technology can support a new lifestyle that is both environmentally sound and spiritually uplifting *Nature, Technology and the Sacred* Bronislaw Szerszynski, 2008-04-15 This provocative and timely book argues that contemporary ideas and practices concerning nature and technology remain closely bound up with religious ways of thinking and acting Using examples from North America Europe and elsewhere it reinterprets a range of secular phenomena in terms of their conditioning by a complex series of transformations of the sacred in Western history The contemporary practices of environmental politics technological risk behaviour alternative medicine vegetarianism and ethical consumption take on new significance as sites of struggle between different sacral orderings Nature Technology and the Sacred introduces a radically new direction for today s critical discourse concerning nature and technology one that reinstates it as a moment within the ongoing religious history of the West *Confluence* Sara B. Pritchard, 2011-04-04 Because of its location volume speed and propensity for severe flooding the Rh ne France s most powerful river has long influenced the economy politics and transportation networks of Europe Humans have tried to control the Rh ne for over two thousand years but large scale development did not occur until the twentieth century The Rh ne valley has undergone especially dramatic changes since World War II Hydroelectric plants nuclear reactors and industrialized agriculture radically altered the river as they simultaneously fueled both the physical and symbolic reconstruction of France In *Confluence* Sara B Pritchard traces the Rh ne s remaking since 1945 She interweaves this story with an analysis of how state officials technical elites and citizens connected the environment and technology to political identities and state building In the process Pritchard illuminates the relationship between nature and nation in France Pritchard s innovative integration of science and technology studies environmental history and the political history of modern France makes a powerful case for envirotechnical analysis an approach that highlights the material and rhetorical links between ecological and technological systems Her groundbreaking book demonstrates the importance of environmental management and technological development to culture and politics in the twentieth century As Pritchard shows reconstructing the Rh ne remade France itself *Lifestyle and Nature* Ryuzo Furukawa, Yuko Suto, Emile Ishida, Takeshi Yamauchi, 2019-02-05 Environmental constraints are becoming increasingly severe

and now more than ever it is time that we confront head on the change from an underground resources type of civilization to one with a new way of life and technology that embraces a sense of nature To do so we need to understand the process of the civilization change We must change our way of thinking to backcasting in order to design future lifestyles and learn from the elderly who lived with nature under severe environmental constraints more than 70 years ago We must also learn from nature directly the only sustainable society on earth This book introduces Bio TRIZ and ontology engineering to match and find technologies needed for spiritually affluent lifestyles It provides many examples of Japanese cities that conducted lifestyle design projects based on nature technology The book is a great reference for graduate level students of environmental studies and engineering and for researchers in innovation social science engineering and public policy especially those with an interest in lifestyle change for a sustainable society

Under Technology's Thumb William Leiss, 1990 Lucid and trenchant essays on the philosophy of nature arguing for an attitude of respect rather than domination of the environment We have according to Leiss communications Simon Fraser U no obligation to accept the imposition of new technologies but even if we do accept technological innovation we retain the right and duty to shape the applications and results according to our vision of the good society Annotation copyrighted by Book News Inc Portland OR

**New Worlds, New Technologies, New Issues** Stephen H. Cutcliffe, 1992 In this volume fifteen scholars from the United States Spain Puerto Rico and Colombia discuss the social implications of new technologies Their essays address the cultural worlds that crystallize around technologies the challenges to democracy that they pose and the responsibility of modern technology for forcing a public response to new social and moral issues Three themes define the three sections into which the volume is divided New Worlds New Technologies and New Issues The essays in the section New Worlds range from optimism that new technologies will produce a better world than that of 1992 through a nonjudgmental discussion of the transformation of our lifeworld that new technologies are effecting to deep concern for the viability of the world that modern technology has already created In New Technologies the focus is on political responses to modern technologies The authors in this section see the challenge to understanding and controlling our technological world in reshaping existing relations of social power and authority and in creating new institutions more adequate to the sociopolitical realities of the process of technological innovation While the contributors in

the first two sections of the volume argue that broad changes in values and institutions are preconditions of a more beneficent relationship among people nature and technology those in the section New Issues adopt narrower more specific viewpoints Their essays address the political values underlying the Deep Ecology movement the ethics of military technologies the capacity of democratic institutions for a public role in setting technology policies and science and technology literacy mechanisms Collectively these essays reflect the growing international concern with the role played by technological innovation in a rapidly changing world and they point toward the formulation of concrete political platforms for informed social responses to the innovation process

Evaluating New Technologies Paul Sollie, Marcus Düwell, 2009-04-03

human practices How are we to morally evaluate technology developments that have open horizons encompass uncertainties and lack control. Technology is influential on society technological innovations act upon the perception of ourselves the world and our relation with fellow humans and other objects. Technology is changing everything we do by creating new entities such as software nanoparticles or Internet by changing the scale of activities e.g. vast amounts of data about people can be stored and analysed and not infrequently without people being aware of this by generating new kinds of knowledge for instance about illnesses the human genome and so on. Technologies as a consequence impinge upon our morality and for this reason an ethics of technology should not wait passively until moral problems arise and not only focus on identified and existing moral problems but contemplate technology developments and possible impacts proactively. However this is easier said than done because a prospective and proactive evaluation of technology developments is complicated by complexity and uncertainty. The uncertainty of technology development is closely related to one of the striking features of technology namely what Jim Moor has coined logical malleability. 1985-269 Technological devices are logically malleable in that they can be shaped to do any activity that can be characterised in terms of logical operations.
