evolutionary process in which people played a role only unwittingly and as actors in a numberless cast that spanned the plant and animal kingdoms Nature's Greatest Success is the first book to bring together recent scientific discoveries and fascinating ongoing research to provide a systematic account of not only how agriculture really developed but why Through fifteen chapters this book dives deep into the complex processes that drove domestication and the various roles that plants and animals including humans played in bringing about those changes At the intersection of popular history archaeology and evolutionary biology Nature's Greatest Success offers a revolutionary account of humanity not at the apex of nature but deeply embedded in the natural world and the evolutionary processes that continue to guide it even today
