How to Best Teach Bioethics Nordisk Ministerråd, 2004

Teaching Bioethics a Nordic Workshop on How to Best Teach Bioethics was organized by the Nordic Committee on Bioethics and the Nordic Academy for Advanced Study NorFA in March 2003. The workshop brought together thirty-one participants: PhD students, researchers, teachers, and administrators from all the Nordic and Baltic countries, in addition to twenty speakers as well as most members of the Nordic Committee on Bioethics. The report based on the workshop provides an introduction to the question of teaching bioethics and discusses how to communicate ethical and scientific issues to journalists and to the general public. The report concentrates on particular methods of teaching bioethics and illustrates the methods with different topics. Also included in the report are articles based on most of the presentations of methods of teaching bioethics given at the workshop as well as articles by four of the participants describing their experience of and views on the workshop.

Origins of Darwin's Evolution J. David Archibald, 2017-10-10

Historical biogeography: the study of the history of species through both time and place first convinced Charles Darwin of evolution. This field was so important to Darwin's initial theories and line of thinking that he said as much in the very first paragraph of *On the Origin of Species* 1859 and later in his autobiography. His methods included collecting mammalian fossils in South America clearly related to living forms, tracing the geographical distributions of living species across South America and sampling peculiar fauna of the geologically young Galapagos Archipelago that showed evident affinities to South American forms. Over the years Darwin collected other evidence in support of evolution but his historical biogeographical arguments remained paramount so much so that he devotes three full chapters to this topic in *On the Origin of Species*. Discussions of Darwin's landmark book too often give scant attention to this wealth of evidence and we still do not fully appreciate its significance in Darwin's thinking. In *Origins of Darwin's Evolution* J. David Archibald explores this lapse showing how Darwin first came to the conclusion that instead of various centers of creation, species had evolved in different regions throughout the world. He also shows that Darwin's other early passion, geology, proved a more elusive corroboration of evolution. *On the Origin of Species* has only one chapter dedicated to the rock and fossil record as it then appeared too incomplete for Darwin's evidentiary standards. Carefully retracing Darwin's gathering of evidence and the evolution of his thinking, *Origins of Darwin's Evolution* achieves a new understanding of how Darwin crafted his transformative theory.
