Grunwald,Matthias Gutmann,Eva M. Neumann-Held,2013-04-17 Modern molecular technology in the so called life sciences biology as well as medicine allows today to approach and manipulate living beings in ways and to an extent which not too long ago seemed Utopian The empirical progress promises further and even more radical developments in the future and it is at least often claimed that this kind of research will have tremendous effects on and for all of humanity for example in the areas of food production transplantation medicine including stem cell research and xenotransplantation therapeutic genetic manipulation and cell line cloning of cell lines or tissues and of biodiversity conservation strategies At least in Western industrialized countries the development of modern sciences led to a steady increase of human health well being and quality of life However with the move to make the human body itself an object of scientific research interests the respective scientific descriptions resulted in changes in the image that human beings have of themselves Scientific progress has led to a startling loss of traditional human self understanding This development is in contrast to an understanding according to which the question what it means to be human is treated in the realm of philosophy And indeed a closer look reveals that without denying the value of scientific progress science cannot replace the philosophical approach to anthropological questions *The Better Angels of Our Nature* Steven Pinker,2012-09-25 Faced with the ceaseless stream of news about war crime and terrorism one could easily think this is the most violent age ever seen Yet as bestselling author Pinker shows in this startling and engaging new work just the opposite is true

in particular the theological underpinning of Stoic ethics which Jedan contends has been underestimated in current accounts of Stoic ethics Jedan argues that the theological motifs in Stoic ethics are in fact pivotal to a complete understanding of Stoic ethics The book focuses on Chrysippus the most important of the early Stoic thinkers suggesting that his contribution and in particular its religious aspect remained a key point of reference for later Stoics This fascinating book makes a crucial contribution to the field of ancient ethics *The Nature and Rationale of Zen/Chan and Enlightenment* Ming Dong

Gu, 2023-07-14 This book initiates a paradigm shift away from Zen Chan as quintessentially Buddhist and examines what makes Chan thought and practice unique and original through an interdisciplinary investigation of the nature and rationale of Chan and its enlightenment Exploring how enlightenment is achieved through Chan practice and how this differs from other forms of Buddhism the book offers an entirely new view of Chan that embraces historical scholarship philosophical inquiry textual analysis psychological studies Chan practice and neuroscientific research and locates the core of Chan in its founder Huineng's theory of no thinking which creatively integrates the Taoist ideas of zuowang forgetting in seated meditation and xinzhai fast of heart mind with his personal experiences of enlightenment It concludes that Chan is the crystallization of an innovative synthesis of Buddhism Daoism and Confucianism as well as other resources of somatic and spiritual cultivation and that enlightenment is a momentary return to the mental state of a baby before birth This book will appeal to students and scholars of religion philosophy and neuroscience It will also offer new insights to thinkers writers artists therapists and neuroscientists as well as those practicing Zen Mindfulness and psychotherapy **Galen: Works on**

and consequences of common diseases **Catching Nature in the Act** Mary Terrall, 2014-04-16 Natural history in the eighteenth century was many things to many people: diversion, obsession, medically or economically useful knowledge, spectacle, evidence for God's providence and wisdom, or even the foundation of all natural knowledge. Because natural history was pursued by such a variety of people around the globe with practitioners sharing neither methods nor training, it has been characterized as a science of straightforward description devoted to amassing observations as the raw material for classification and thus fundamentally distinct from experimental physical science. In *Catching Nature in the Act*, Mary Terrall revises this picture, revealing how eighteenth-century natural historians incorporated various experimental techniques and strategies into their practice. At the center of Terrall's study is René Antoine Ferchault de Reaumur (1683-1757), the definitive authority on natural history in the middle decades of the eighteenth century and his many correspondents, assistants, and collaborators. Through a close examination of Reaumur's publications, papers, and letters, Terrall reconstructs the working relationships among these naturalists and shows how observing, collecting, and experimenting fit into their daily lives. Essential reading for historians of science and early modern Europe, *Catching Nature in the Act* defines and excavates a dynamic field of francophone natural history that has been inadequately mined and understood to date. [Nature's Embrace](#) Satsuki Kawano, 2010-03-31 Based on extensive fieldwork, *Nature's Embrace* reveals the emerging pluralization of death rites in postindustrial Japan. Low birth rates and high numbers of people remaining permanently single have led to a shortage of ceremonial caregivers: most commonly married sons and their wives to ensure the transformation of the dead into ancestors resting in peace. Consequently, older adults are increasingly uncertain about who will perform memorial rites for them and maintain their graves. In this study, anthropologist Satsuki Kawano examines Japan's changing death rites from the perspective of those who elect to have their cremated remains scattered and celebrate their return to nature. For those without children, ash scattering is an effective strategy as it demands neither a grave nor a caretaker. However, the adoption of ash scattering is not limited to the childless. By forgoing graves and lightening the burden on younger generations to care for them, this new mortuary practice has given its proponents an increased sense of control over their posthumous existence. By choosing ash scattering, older adults contest their dependent status in Japanese society, which increasingly views the aged as passive care recipients. As such, this study explores not only new developments in mortuary practices but also voices for increased self-sufficiency in late adulthood and the elderly's reshaping of ties with younger generations. *Nature's Embrace* offers insightful discussion on the rise of new death rites and ideologies, older adults' views of their death rites, and Japan's changing society through the eyes of aging urbanites. This book will engage a wide range of readers interested in death and culture, mortuary ritual, and changes in age relations in postindustrial societies. **Edward Burne-Jones on Nature** Liana De Girolami Cheney, 2021-05-21 This volume studies some of Edward Burne-Jones's paintings, focusing specifically on his approach to nature both through his observations about the real physical world and through his symbolic interpretations of

earthly and celestial realms Burne Jones's appreciation for natural formations grew from his interests in astronomy and geography and was expanded by his aesthetic sensibility for physical and metaphysical beauty His drawings and watercolors carefully recorded the physical world he saw around him These studies provided the background for a collection of paintings about landscapes with flora and fauna and ignited an artistic furor that inspired the imagery he used in his allegorical fantasy and dream cycles about forests winding paths and sweet briar roses This study focuses on two main ideas Burne Jones's concept of ideal and artificial or magical nature expressed and represented in his drawings and paintings and the way in which he fused his scientific knowledge about nature with some of the symbolism in his paintings
