Burch,2016-03-04 This book has been used for 30 years updated periodically as needed More than 20 000 students have successfully learned ocean navigation from these materials and gone on to cross oceans or circumnavigate the globe This book covers how to find position at sea from timed sextant sights of the sun moon stars and planets plus other routine and special procedures of safe efficient offshore navigation No previous navigation experience is required The only math involved is arithmetic adding and subtracting angles and times This is a practical how to do it book which also includes clear explanations of how it works and how to do it well Plus this book includes other crucial factors of ocean navigation besides just finding out where you are from the stars such as logbook procedures dead reckoning error analysis route planning and more At the end of this book you will be ready for ocean navigation The book includes text practice problems tables selections detailed glossary and full solutions Printable work forms plotting sheets and other resources are available at no charge from [www.starpath.com](http://www.starpath.com) [celnavbook](http://celnavbook.com) Preface to the Second Edition We are pleased to say that after ten more years of using this text we do not find reason to change the basic approach and methods of the teaching We still use most of the same examples which are now quite old but that is the beauty of celestial navigation It has not changed so we do not benefit in any way from making all new examples which would bring with them more chance of error in a book of many numbers We have however notably improved and expanded the book Each section has been updated and reformatted for a clearer presentation often in response to student questions over the years New graphics have been added and older ones all updated There is much new content in the text especially in the In Depth chapter including more detailed discussion of the sailings and more background on the principles New sections were added on general ocean navigation and optimizing the fixes We have also updated the electronic navigation section as most ocean navigators will also be using other tools besides celestial

Trigonometry for Navigating Officers W. Percy Winter,1928      *Astronavigation* K.A. Zischka,2017-05-30 This book acts as a manual for the ancient methods of navigating by the stars which continue to provide the sailor or pilot with a timeless means of determining location Despite the prevalence of GPS a comprehensive set of formulae that can be evaluated on any inexpensive scientific calculator in the event of a catastrophic software or systems failure is a vital failsafe It also serves as a living link to centuries of explorers from centuries past Beginning with the basics of positional astronomy this guide moves on to the more complex math necessary to understand the ephemerides tables showing the future positions of the stars and planets These astronomical almanacs were the satellite navigation of their day The objective of this book is twofold to provide the reader with a concise comprehensible manual on positional astronomy as it applies to astro navigation and to furnish the concise algorithms for finding the position of the Sun and various navigational stars at any given instant In a world where too many mariners and aeronauts rely solely on technology and are vulnerable to solar flares electrical issues and the like this knowledge can be a life saving backup not to mention a fascinating study in its own rights Included is an exact mathematical way to determine your position in the air or on the sea far more quickly and accurately than by using the old celestial

navigational method without even needing to know or understand the underlying mathematics There is even a section that teaches how to measure the azimuth of a star using an analog wrist watch so if a sextant gets damaged locating position is still possible This book offers mathematicians and adventurers a way to determine position when the skies go dark The U S Navy has recently realized that their electronic navigation systems are vulnerable to cyberattack and as a result has instructed the Naval Academy to begin teaching celestial navigation again     **Polynesian Navigation and the Discovery of New Zealand** Jeff Evans, 2011 First published 1998 as The discovery of Aotearoa by Reed Book
