Mapping the Deep: The Extraordinary Story of Ocean Science Robert Kunzig,2000-10-17 A vivid tour of the Earth's last frontier a remote and mysterious realm that nonetheless lies close to the heart of even the most land locked reader The sea covers seven tenths of the Earth but we have mapped only a small percentage of it The sea contains millions of species of animals and plants but we have identified only a few thousand of them The sea controls our planet's climate but we do not really understand how The sea is still the frontier and yet it seems so familiar that we sometimes forget how little we know about it Just as we are poised on the verge of exploiting the sea on an unprecedented scale mining it fertilizing it fishing it out this book reminds us of how much we have yet to learn More than that it chronicles the knowledge explosion that has transformed our view of the sea in just the past few decades and made it a far more interesting and accessible place From the Big Bang to that far off future time two billion years from now when our planet will be a waterless rock from the lush crowds of life at seafloor hot springs to the invisible jewel like plants that float at the sea surface from the restless shifting of the tectonic plates to the majestic sweep of the ocean currents Kunzig's clear and lyrical prose transports us to the ends of the Earth Originally published in hardcover as *The Restless Sea*

The Restless Sea Robert Kunzig,1999 The sea covers seven tenths of the Earth but we have mapped only a small percent of it The sea contains millions of species of animals and plants but we have identified only a few thousand of them The sea controls our planet's climate but we do not really understand how The sea is still the frontier and yet it seems so familiar that we sometimes forget how little we know about it Just as we are poised on the verge of exploiting the sea on an unprecedented scale mining it fertilizing it fishing it out this book reminds us of how much we have yet to learn More than that it chronicles the knowledge explosion that has transformed our view of the sea in just the past few decades and made it a far more interesting and accessible place

Singing Whales and Flying Squid Richard Ellis,2006-01-01 Two thirds of this planet is covered by water inhabited by an incredible variety of living organisms ranging in size from microbe to whale and in abundance from scarce to uncountable Whales and dolphins must surface to breathe and some fishes occupy surface waters and can easily be seen from boats or

shore but most of the marine bio profusion is hidden from human eyes often under thousands of feet and millions of tons of water which is usually cold dark and utterly inhospitable to humans By definition the study of marine life has been quantitatively and qualitatively different from the study of terrestrial life it is if you will a different kettle of fish What do we know today how have we learned it and what remains unknown and unknowable about inner space Because there have been so few human visitors to the uninviting world of the deep sea scientists have had to rely on trawled specimens photographs taken by robotic cameras or occasionally observations from deep diving submersibles to get even the vaguest idea of the nature of life in the abyss So far even our most elaborate efforts to penetrate the blackness have produced only minimal results It is as if someone lowered a collecting basket from a balloon high above the tropical rain forest floor and tried to analyze the nature of life in the jungle from a couple of random hauls The inner space of the deep offers the last frontier on the planet Even now we know more about the back side of the moon than we do about the bottom of the ocean but then the surface of the moon is not hidden under miles of impenetrable water But we do know that living in this inaccessible medium are some of the most fascinating creatures on Earth An understanding of the interrelationships between various creatures including the one predator that has the power to distort damage or even eliminate populations of marine animals is necessary if we are to survive in harmony with these populations Although new technologies have given us tools to better census the whales dolphins and fishes and to see heretofore unexpected life and geological forms deep under the sea we are a long way from comprehending the nature and importance of marine biodiversity Singing Whales Flying Squid and Swimming Cucumbers is an attempt to put the search for knowledge into perspective to try to find out how we got here and where with the help of curiosity science and technology we might be headed With this as our Baedeker we will voyage through time and space tracing the history of the discovery of marine biology from the moment that the first scientists although for the most part science had barely been invented tried to figure out what sorts of creatures lived in the Mediterranean the sea right off their shores So join Richard Ellis on an underwater adventure like no other you ve ever taken or heard of a voyage to discover the mysteries and reveal the wonders of marine life more unusual and more astonishing than you or anyone else ever imagined

The Universe Below William J Broad,1998-06-16 Explores the depths of Earth s oceans to discover a long hidden world of alien creatures vanished civilizations and lost ships and describes the new technologies that make such expeditions possible

Ocean Ridges and Trenches Peter Aleshire,Geoffrey H. Nash,2007 Reveals how 10 undersea mountain ranges and valleys came to be how and why it has changed over the span of geologic time and its contributions to the environment

The Oceans: Key Issues in Marine Affairs Hance D. Smith,2012-11-03 The oceans provide a great challenge for the development and management of planet earth by humankind This book covers new approaches to the development of the law of the sea the division of the oceans among states and new thinking on institutions in depth

Sylvia Earle Beth Baker,2006-01-01 Describes the life of this groundbreaking marine biologist and diver from her
