Dinosaur Imagery John J. Lanzendorf, 2000-05-24 The art of natural history is often both compelling and emotive as well as emblematic of society's view of the world This art reflects the messages that scientists hope to send to a general audience as a part of their effort to influence how public funds are spent in support of science The art is the medium AND the message The public fascination over dinosaurs has been fueled by images that eloquently illustrate current scientific theories about dinosaur behavior physiology locomotion and reproduction The evidence for many of these theories is very good The art of dinosaur depiction is firmly rooted in the processes of scientific inquiry Because the paintings and sculptures that illustrate dinosaur science are so powerful collectors vie for this art paying top dollar to acquire it and display it One of the largest personal collections is held by John Lanzendorf over 100 superlative paintings and drawings 40 significant sculptures bronze many other small pieces drawings figurines action figures and more Artists represented in this unparalleled collection are the best illustrators painters sculptors and movie magicians Key Features Art from the John Lanzendorf collection the world's best Contributions from 20 leading paleontologists each have written a short commentary on a certain piece of art Eye pleasing layout full pages of art are complemented by an accompanying page of commentary

Dinosaurs of the Air Gregory S. Paul, 2002-05 This book synthesises the growing body of evidence which suggests that modern day birds have evolved from theropod dinosaurs of prehistoric times The author argues that the ancestor descendant relationship can also be reversed

**Islands in the Cosmos** Dale A. Russell, 2009-07-14 How is it that we came to be here The search for answers to that question has preoccupied humans for millennia Scientists have sought clues in the genes of living things in the physical environments of Earth from mountaintops to the depths of the ocean in the chemistry of this world and those nearby in the tiniest particles of matter and in the deepest reaches of space In *Islands of the Cosmos* Dale A Russell traces a path from the dawn of the universe to speculations about our future on this planet He centers his story on the physical and biological processes in evolution which interact to favor more successful and eliminate less successful forms of life Marvelously these processes reveal latent possibilities in life's basic structure and propel a major evolutionary theme the increasing proficiency of biological function It remains to be seen whether the human form can survive the dynamic processes that brought it into existence Yet the emergence of the ability to acquire knowledge from experience to optimize behavior to conceptualize to distinguish good from bad behavior all hint at an evolutionary outcome that science is only beginning to understand
