Borel, 2014-12-04 Armand Borel's mathematical work centered on the theory of Lie groups Because of the increasingly important place of this theory in the whole of mathematics Borel's work influenced some of the most important developments of contemporary mathematics His first great achievement was to apply to Lie groups and homogeneous spaces the powerful techniques of algebraic topology developed by Leray Cartan and Steenrod In 1992 Borel was awarded the International Balzan Prize for Mathematics for his fundamental contributions to the theory of Lie groups algebraic groups and arithmetic groups and for his indefatigable action in favor of high quality in mathematical research and of the propagation of new ideas He wrote more than 145 articles before 1982 which were collected in three volumes published in 1983 A fourth volume of subsequent articles was published in 2001 Volume I collects the papers written from 1948 to 1958 *Collected papers* Gerrit Smith Miller, 1900 *Collected Papers* Sir Adolphus William Ward, 1921 **Collected papers** Géza Gyula Fejérváry (báró), 1909 **Collected Papers** Mayo Clinic, 1920 *Collected Papers* Harvard Medical School. Lie Groups Beyond an Introduction Anthony W. Knap, 2013-03-09 Fifty years ago Claude Chevalley revolutionized Lie theory by publishing his classic *Theory of Lie Groups* I Before his book Lie theory was a mixture of local and global results As Chevalley put it This limitation was probably necessary as long as general topology was not yet sufficiently well elaborated to provide a solid base for a theory in the large These days are now passed Indeed they are passed because Chevalley's book changed matters Chevalley made global Lie groups into the primary objects of study In his third and fourth chapters he introduced the global notion of analytic subgroup so that Lie subalgebras corresponded exactly to analytic subgroups This correspondence is now taken as absolutely standard and any introduction to general Lie groups has to have it at its core Nowadays local Lie groups are a thing of the past they arise only at one point in the development and only until Chevalley's results have been stated and have eliminated the need for the local theory But where does the theory go from this point Fifty years after Chevalley's book there are clear topics E Cartan's completion of W Killing's work on classifying complex semisimple Lie algebras the treatment of finite dimensional representations of complex semisimple Lie algebras and compact Lie groups by Cartan and H Weyl the structure theory begun by Cartan for real semisimple Lie algebras and Lie groups and harmonic analysis in the setting of semisimple groups as begun by Cartan and Weyl
