Eibl, W.R. Mayr, G.J. Thorbecke, 2012-12-06 Karl Landsteiner is best known for his discovery of the human blood groups The revolutionary discoveries of this brilliant scientist in other fields have not received the recognition they deserve His demonstration that poliomyelitis is transmissible showed the way of modern virology His studies opening the field for epitope recognition which he himself considered his main achievement laid the foundation for research ongoing in our days This book with its outstanding contributors is but a small tribute to this visionary scientist **Mechanism of Action of Antieukaryotic and Antiviral Compounds** Fred E. Hahn, 2012-12-06 When Antibiotics I was published in 1967 the teleological view was held by some that antibiotics were substances elaborated by certain microorganisms for the purpose of competing with other microorganisms for survival in mixed ecological environments However not only had J EHRLICH and his associates shown 15 years earlier that chloramphenicol was produced by *Streptomyces venezuelae* in cultures of sterilized soils but not in parallel cultures of the same soils which were not sterilized but operationally the search for anti cancer antibiotics was actively under way Antibiotics I reporting on numerous such substances although the concept of antibiosis could not logically justify such undertakings This editor hesitates to accept the use of the term antibiotic for anti microbial agents of non microbiological origins which is sometimes encountered but neither does he subscribe to the view that antibiotics are in some fundamental manner different from chemotherapeutic substances of other origins Modes and

mechanisms of action of chemotherapeutic compounds are not systematic functions of their origins nor of the taxonomical position of the target organisms Consequently in the selection of topics for Antibiotics III published in 1975 synthetic drugs and natural products of higher plants alkaloids were represented along with antibiotics in the strict sense of the definition We now present Antibiotics V for whose assembly the same selection criteria were applied as for Antibiotics III The aggregate length of the contributions rendered it impractical to place the entire text between the covers of one book **Biomedical**
