Community Ecology and Salamander Guilds Nelson G. Hairston, 1987-11-27 This informative book first published in 1987 presents the theories of community ecology within the context of a natural example. The text describes and examines issues in community ecology and shows how research on salamanders has helped to solve some of the problems surrounding the theories. Salamanders exist in stable populations of the kind assumed in community theory and are more appropriate than most other animals for research on the applications of that theory. The interesting and meaningful results collected from observation on these excellent subjects posed challenges to beliefs within community ecology. Life histories of salamanders, fieldwork in distinctly differing habitats, competition, predation, and evolution are discussed in an easily readable text. Professional ecologists and students of community ecology and herpetology will be interested in the information synthesised in this book.

The Biology of Plethodontid Salamanders Richard C. Bruce, Robert G. Jaeger, Lynne D. Houck, 2012-12-06 The fourth Conference on the Biology of Plethodontid Salamanders was held at The Mountain in Highlands, North Carolina, on June 12-14, 1998. Hosted by the Highlands Biological Station and sponsored by the Highlands Biological Foundation, Inc., the conference afforded a state-of-the-art overview of these animals as evidenced by the contents of the present volume and the credentials of the contributors. In the following pages, the reader will find the best current understanding of many aspects of plethodontid salamander evolution, systematics, development, morphology, life history, ecology, and field methodology. While the contents of this book consist of chapters developed from selected conference papers, their excellence is representative of the high overall quality of the conference presentations. The Highlands Biological Station is located on the Highlands Plateau in the southern Blue Ridge Mountains. As these mountains are a present center of plethodontid diversity and are considered by some to be the center of origin of the group, the Highlands Biological Station has historically been important in the study of these animals. A list of visitors to the Station for the last 70 years would include a who's who of twentieth-century North American herpetologists. The location and amenities of the Highlands Biological Station are unique. Within the city limits of Highlands, at an elevation of nearly 1200 meters, the Station includes modern research laboratories, administrative offices, library facilities, as well as dormitory and living facilities.
