Of The Mangrove Coast:

Dynamic Sedimentary Environments of Mangrove Coasts Daniel Friess, Frida Sidik, 2020-12-05 *Dynamic Sedimentary Environments of Mangrove Coasts* provides knowledge on the importance of sedimentary dynamics in managing mangrove forests. In the first part of the book the editors seamlessly offer a general introduction of mangrove sedimentary dynamics. This leads into more in depth information on soil surface elevation change, sea level rise and the importance of sedimentary dynamics in the loss or gain of blue carbon. The book concludes the discussion of mangrove sedimentary dynamics by addressing the issues of climate change e.g. sea level rise and blue carbon on mangrove restoration and sediment. This book will assist coastal managers and academics in addressing the gaps in mangrove restoration and coastal management. As such it will be a valuable reference for advanced undergraduate students, graduate students, researchers, academics in the field of coastal restoration and coastal management practitioners. Provides a state of the art summary of research into sedimentary dynamics in mangrove forests. Includes updates on issues of climate change relevant to mangroves such as blue carbon and sea level rise. Presents scientific background and successful case studies for mangrove restoration that can solve problems relating to mangrove management.

Threats to Mangrove Forests Christopher Makowski, Charles W. Finkl, 2018-04-20 This book focuses on the worldwide threats to mangrove forests and the management solutions currently being used to counteract those hazards. Designed for the professional or specialist in marine science, coastal zone management, biology and related disciplines, this work will appeal to those not only working to protect mangrove forests but also the surrounding coastal areas of all types. Examples are drawn from many different geographic areas including North and South America, India and Southeast Asia. Subject areas covered include both human induced and natural impacts to mangroves, intended or otherwise, as well as the efforts being made by coastal researchers to promote restoration of these coastal fringing forests.

Proceedings, 1954 *Tsunamis and Earthquakes in Coastal Environments* V. Santiago-Fandino, H. Tanaka, M. Spiske, 2016-04-14 This monograph is a compilation of a number of research studies presented in fourteen chapters dealing with the impact and restoration of coastal environments that have been affected by earthquakes and tsunamis. The focus is mainly on rivers, estuaries, coastal lagoons, beaches and related ecosystems. In addition to direct impact and response due to flooding and subsequent abrasion, this publication covers physical, chemical and biological responses in coastal morphology, water quality and ecosystems and includes also topics dealing with risk reduction and vulnerability. This compilation mainly covers examples from large magnitude earthquake and tsunami events in the Indian and Pacific Ocean that are complemented with other events in Latin America and the Iberian Peninsula. Comprehensive descriptions of multi scale

impacts of tsunami and earthquake events both spatially and temporally will help the reader to understand the complicated interactions which occur in coastal zones in order to create a sustainable resilient environment and achieve a society with smart post event recovery planning This book is aimed at researchers and students in coastal science and engineering as well as at policy makers environmental planners and coastal managers Mangrove Ecosystem: Structure and Function V.P.
