Industries Alireza Bahadori, 2015-05-21 Oil and gas companies are repeatedly cited by regulatory organizations for poor training and maintenance on providing personal protective equipment to their refinery workers. Managers of refinery and petrochemical plants are responsible for instructing their workers with the types of equipment available, how to properly wear the equipment, how to properly care and maintain the equipment, and most importantly, it's their responsibility to enforce these regulations and safety requirements. While there are many reference materials on the subject, most are too broad to apply directly to the unique and highly volatile atmosphere of an oil and gas operation. *Personnel Protection and Safety Equipment for the Oil and Gas Industries* answers the call for safety managers onsite as well as workers to understand all the safety equipment available specifically for the energy sector. Condensed into one convenient reference location, this training guide is designed to inform on several types of personnel protective clothing, firefighting protective clothing,

respiratory protective devices available as well as many other types of protective equipment including fall protection and vehicle safety belts and harnesses. Industry specific examples, multiple illustrations and a glossary of terms make *Personnel Protection and Safety Equipment for the Oil and Gas Industries* a must have on every oil and gas operation. Know recommended US and international protective safety equipment regulations. Learn the types, classes and materials of safety and protective equipment specific to the oil and gas industry. Gain knowledge on how to select, test, maintain and store protective equipment properly.

[Safety in the Utilization and Modification of Research Reactors](#) IAEA, 2022-09-01. This Safety Guide is a revision of IAEA Safety Standards Series No. SSG-24, which it supersedes. The current publication provides recommendations on how to meet the applicable safety requirements relating to the utilization and modification of research reactors. The recommendations focus on the categorization, safety assessment and approval of research reactor experiments and modification projects. The publication also incorporates the relevant lessons learned from the accident at the Fukushima Daiichi nuclear power plant and elaborates on interfaces between nuclear safety and nuclear security. Specific safety considerations in different phases of utilization and modification projects are covered, including pre implementation, implementation and post implementation phases. Guidance is given on operational safety of experiments, including the handling, dismantling, post irradiation examination and disposal of experimental devices. The publication is intended to be of use to individuals within the operating organizations of research reactors, regulatory bodies as well as the experimenters, technical support organizations and other persons involved in utilization and modification projects.
