Food irradiation is increasingly used worldwide as a proven and effective method of food preservation as well as for improvement of food safety and quality The International Conference on Ensuring the Safety and Quality of Food through Radiation Processing convened for the presentation of new irradiation technology and to assess the role of irradiation in ensuring the safety and nutritional adequacy of food of plant and animal origin This new book presents the complete texts of all twenty reports from the conference Examined are applications of the technology in produce animal products and prepared foods the economics of various irradiation technologies international regulations the marketing of irradiated products to consumers and retail outlets and irradiation s implications for the global trade in food and agricultural commodities Also included is new information on the scientific regulatory and consumer acceptance status of food irradiation and the role this technology will play in the 21st century The new information in this book will be useful to all those involved in the processing preservation and distribution of food as well as food industry managers and regulatory personnel To receive your copy promptly please order now Information on ordering follows the complete table of contents Conference Sponsors and Speakers This conference was sponsored by three U N Agencies IAEA International Atomic Energy Agency FAO Food and Agriculture Organization and the WHO World Health Organization All authors are leading experts in aspects of food irradiation From the Editor s Foreword Significant developments on the acceptance and application of food irradiation as a method to ensure food safety and quality and to facilitate food trade have occurred in recent years Regulations on food irradiation in many countries either have been or are being harmonized based on the Codex General Standard for Irradiated Foods and relevant recommendations of the International Consultative Group on Food Irradiation ICGFI The number of irradiation facilities for treating food is increasing and many more are under construction or being planned The consumers are getting accurate information and are beginning to appreciate the benefit of irradiated foods The potential of irradiation as a method to ensure the hygienic quality of food especially those of animal origin as a quarantine treatment of fresh horticultural commodities and as a substitute for fumigants is being realized The Conference reaffirmed the view that the safety and nutritional adequacy of irradiated food produced under conditions of Good Manufacturing Practice is no longer in question regardless of the absorbed dose **Food Irradiation Research and Technology** Christopher H. Sommers, Xuetong Fan, 2008-02-28 The benefits of food irradiation to the public health have been described extensively by organizations such as the Centers for Disease Control and Prevention in the U S and the World Health Organization The

American Medical Association and the American Dietetic Association have both endorsed the irradiation process Yet the potential health benefits of irradiation are unknown to many consumers and food industry representatives who are wary of irradiated foods due to myth information from consumer advocate groups Food Irradiation Research and Technology presents the latest scientific findings of researchers at the leading edge of food irradiation In this book experts from industry government and academia define the basic principles of irradiation and the public health benefits of irradiation describe advances in irradiation technology detection technology and radiation dosimetry review the regulations pertaining to food irradiation and the toxicological safety data provide food industry representatives and public health officials with effective methodologies to educate consumers and counteract misinformation review recent advances in the irradiation of meat and poultry fruits and vegetables seafood and the use of irradiation as a phytosanitary treatment Food Irradiation Research and Technology appeals to a broad readership industry food scientists involved in the processing of meat and fish fruits and vegetables food microbiologists and radiation processing specialists government and industry representatives involved in the import and export of food commodities and industry local and state officials involved in educational efforts regarding food irradiation Food scientists and technologists share a responsibility to ensure that educational materials provided to the public regarding food safety and processing technologies are based on sound science and fact not on misconceptions Food Irradiation Research and Technology meets that goal

Food Irradiation Technologies Isabel C F R Ferreira, Amílcar L Antonio, Sandra Cabo Verde, 2017-12-19 Food preservation by irradiation is gaining recognition as a technology that is more environmentally benign than other current processes such as post harvest chemical fumigation it has less impact on thermally sensitive compounds than thermal decontamination technologies such as hot water or steam and the technology is more accessible and cheaper As the technical and economic feasibility as well as the level of consumer acceptance have increased its use has been growing fast International organizations including the Food and Agriculture Organization of the United Nations FAO the International Atomic Energy Agency IAEA and the World Health Organization WHO have coordinated and worked with others to develop norms and review the safety and efficacy of irradiated foods Commended in the Foreword by Carl Blackburn Food Irradiation Specialist Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture this book makes a strong case for the use of this overwhelmingly safe food processing technique This comprehensive book is a useful reference for food technologists analytical chemists and food processing professionals covering all aspects of gamma electron beam and X ray food irradiation its impact on food matrices and microorganisms legislation and market aspects It is the first book to cover control and structural analysis in food irradiation and being written by leading experts in the field addresses the current global best practices It contains updated information about the commercial application of food irradiation technology especially regarding the type of radiation based on food classes and covers dosimetry radiation chemistry food decontamination food quarantine food processing and food sterilization

Safety

assurance during food processing Frans J.M. Smulders, John D. Collins, 2023-08-28 Microbial agents particularly bacteria represent the greatest risk to public health The traditional end product oriented food inspection systems are inadequate for identifying and eliminating the usually symptomless animal carriers of agents causing foodborne infections and intoxications Modern risk based prevention approaches are the only effective way to reduce the prevalence of these hazards from our foods As an additional safety valve microbial decontamination procedures are currently being suggested and its implementation in industrial food processing has at least in some parts of the world met with governmental approval The residues in foods of some non microbial agents have more recently also caused substantial consumer disquiet This equally applies to non conventional foods containing GMO s In this publication these issues are addressed by invited expert scientists from various disciplines many of which have key positions in EU funded research programmes on these very topics and or are advisers to international public health bodies The editors firmly believe that the very nature of the theme the excellence of the papers and the holistic approach chosen will draw an audience from both an industry and academic background
