Salt The Moscow Agreements And Beyond:

Great Power Security Cooperation David W. Kearn, 2014-12-18 This book explains the conditions under which great powers are likely to cooperate to improve their security by engaging in qualitative arms control. In agreeing to limit or proscribe certain classes of weapons, states will constrain their military capabilities and therefore decrease the threat they pose to potential adversaries. Focusing on the expected military impact of technological change and the capacity of states to confidently monitor the activities of its negotiating partners, it may be possible to forge lasting agreements that improve the security of the participating states. However, at other times, the nature of technological change may force states to engage in competitive behavior, precluding cooperation and increasing the probability of conflict. Examining a diverse set of cases, including the Washington Naval Conference, The World Disarmament Conference at Geneva, the Baruch Plan for the International Control of Atomic Energy, and the SALT I Accords, including the ABM Treaty, this volume presents a persuasive, comprehensive, and interesting contribution to the literature on arms racing and arms control and should be of interest to students of international relations theory and security studies. By presenting a theoretical informed model that explicitly links the security strategies of states to their choices about development and deployment of new weapons and consequently their willingness to engage in arms control cooperation, this book provides an important refinement upon existing theoretical and historical approaches. *National Security, Military Power & the Role of Force in International Relations* United States.
