Salt-affected Soils and Their Management I. P. Abrol, Jai Singh Pal Yadav, F. I. Massoud, 1988 *Salt-affected Soils and Their Management* Food and Agriculture Organization of the United Nations, J. S. P. Yadav, I. P. Abrol, 1980 Global status of salt-affected soils FAO, 2024-12-10 Salt affected soils characterized by high soluble salts saline or exchangeable sodium sodic impact plant growth and occur globally especially in arid and coastal regions Salinization stems from natural causes e g climate change sea level rise and human actions e g poor irrigation practices excessive water use FAO's Global Map of Salt Affected Soils reveals that over 1 381 million hectares 10.7 percent of global land are affected with Australia Argentina and Kazakhstan among the most impacted countries Increasing aridity and water demand amplify soil degradation risks particularly in developing regions Climate change and water scarcity threaten agricultural productivity with substantial crop yield losses observed in saline areas Halophytes and salt tolerant crops provide a foundation for saline agriculture yet many salt affected soils remain unprotected and inadequately regulated FAO's INSAS International Network of Salt Affected Soils underscores the need for updated data harmonized salinity measurements and sustainable management practices with enhanced training and policy frameworks Mitigation strategies like improved drainage soil amendments and the cultivation of salt tolerant plants are recommended Key recommendations include scaling sustainable practices investing in salt tolerant crop markets improving data collection and water quality monitoring conserving ecosystems and fostering cross sector collaboration Such integrated efforts aim to boost food production and resilience in affected regions while protecting vital ecosystems

Mapping of salt-affected soils - Technical manual Food and Agriculture Organization of the United Nations, 2020-08-01 Salt affected soils such as saline or sodic soils are distributed in all continents at various levels of problem intensity They are soils with high amounts of soluble salts and or sodium ions An updated information of their distribution and drivers is a first step towards their sustainable management This book provides technical guidelines and approach for developing a harmonized multiscale soil information of salt affected soils The book is organized into three sections covering seven chapters The sections are sequentially arranged but independently designed to benefit focused readership who may want to go straight to any section Section 1 gives the background information It has three chapters covering existing literature on the characteristics and mapping methods for salt problems in the soil It is intended to illustrate the basic concepts linkage of the characteristics of salt affected soils with input data requirements for their mapping existing classification methods and global distribution of these soils Section 2 covers the methodological procedures for developing multiscale spatial information of salt affected soils It has two chapters

describing requirements input data preparation and the procedural steps for developing spatial information of salt affected soils It outlines how data from different sources and characteristics are harmonized and integrated to produce information of salt affected soils Section 3 covers information sharing and resources mobilization when developing information on salt affected soils It gives the guidelines for preparing spatial maps and steps for value addition to benefit end users of the information It also contains a generic training program for building technical capacity for mapping salt affected

Salt Affected Soils and Their Management D. Prasad,Ravi Prakash Maurya,2014 Crop Production in Salt Affected Soils I.C. Gupta,S.K. Gupta,2019-04-01 The course work for various degree programs are constantly revised and or new courses added so that the future teachers researches and planners are able to face the new emerging challenges The environmental concerns of irrigated agriculture in the form of water logging and soil salinity are expanding and impacting food grains production These challenges are commonly articulated at various forums Thus reclamation management and crop production practices of waterlogged salt affected soils have been introduced as a subject in agricultural and agricultural engineering colleges Since there is a general lack of a good textbook on this subject authors have attempted to fill this gap through the current publication titled Crop Production in Salt Affected Soils It comprehensively deals with the fundamentals of land reclamation principles and crop production practices It has been divided into 16 Chapters The book begins with general introduction comprising of categorization of salt affected soils extent and distribution and nature and physical chemical and biological properties Other chapters includes basic information on on farm land development hydrology irrigation practices drainage methods leaching soil salinization chemical amendments and new innovative techniques including agronomic and cultural practices related to land reclamation Crop production practices for select cereal oil seeds sugar fiber and forage green manure crops grasses and forest plantations are also included Chapter sixteen covers the economic evaluation and social issues involved in land reclamation programs A Glossary of terms has been added for quick overview of the terms used in the book The textbook designed and developed for the undergraduate post graduate students of agricultural agricultural engineering has been profusely illustrated so that students are able to visualize the processes and phenomena being dealt with Besides serving as a text book it will prove to be a handy resource book to conduct specialized training programs on land reclamation We believe that the book will find its due place in the shelves of students and teachers field functionaries and college libraries of state agricultural universities and civil engineering colleges
