Sunrise Tomorrow Elizabeth Brown, Elizabeth B. Brown, 1988 [Philosophy A Visual Encyclopedia](#) DK, 2020-11-10. The perfect book for young readers looking to explore some of life's biggest questions. Thousands of years ago, ancient philosophers asked some important questions: What is real? What is the point of my existence? Why is there evil in the world? and What can I know? These questions have gone on to spark passionate debates about our existence and how we understand the world around us. In this engaging and accessible introduction to philosophy, readers aged 11 will be introduced to a variety of philosophical ideas through the teachings of Plato, Confucius, Simone de Beauvoir, and many more. Vibrant, reader-friendly illustrations bring the history of ideas and thinking to life and provide topics for reflection and debate. With biographies of the most influential philosophers from around the world, young readers will explore the questions that have been fundamental to the development of scientific study, logical thinking, religious beliefs, freedom in society, and much more. Thought experiments peppered throughout will help to connect readers with the theories presented so they can apply them to their own lives.

Well-Being and Death Ben Bradley, 2009-03-05. Well-Being and Death addresses philosophical questions about death and the good life: what makes a life go well? Is death bad for the one who dies? How is this possible if we go out of existence when we die? Is it worse to die as an infant or as a young adult? Is it bad for animals and fetuses to die? Can the dead be harmed? Is there any way to make death less bad for us? Ben Bradley defends the following views: pleasure rather than achievement or the satisfaction of desire is what makes life go well; death is generally bad for its victim in virtue of depriving the victim of more of a good life; death is bad for its victim at times after death, in particular at all those times at which the victim would have been living well; death is worse the earlier it occurs, and hence it is worse to die as an infant than as an adult; death is usually bad for animals and fetuses in just the same way it is bad for adult humans; things that happen after someone has died cannot harm that person; the only sensible way to make death less bad is to live so long that no more good life is possible.

The Future of the Universe A.J. Meadows, 2007-05-27 Many excellent books have been written about the past history of the universe and of the various objects galaxies stars planets to be found in it All the exciting events from the original Big Bang to the appearance of human beings have been carefully recorded Much less has been written about what comes next What will happen to all these galaxies stars and planets in the future And what will happen to us and to any other intelligent life in the universe It is obviously more difficult to examine the future than the past but there are ways of doing it Not everything in the universe is the same age so a study of the older objects gives us some idea of what will happen to the younger objects Some things vary in a fairly regular way so you can guess what will happen next For example the number of spots visible on the Sun's surface increases and then decreases again every eleven years on average These ups and downs can be expected to continue for a considerable time in the future Finally theoretical explanations of how things work at present often give some hint of how they will develop in the future One rule of thumb in astronomy though there are plenty of exceptions is that the further away objects are the less we know about them This means that it is often more difficult to forecast the future for distant objects than for ones nearby
