Si Front End Processing - Physics and Technology II of Dopant-Defect Interactions II: Volume 610 Aditya Agarwal,2001-04-09 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners This book first published in 2001 focuses on the formation of electrical junctions in the front end processing of devices sized for the approaching end of the roadmap **Intrinsic Point Defects, Impurities, and Their Diffusion in Silicon** Peter Pichler,2012-12-06 Basically all properties of semiconductor devices are influenced by the distribution of point defects in their active areas This book contains the first comprehensive review of the properties of intrinsic point defects acceptor and donor impurities isovalent atoms chalcogens and halogens in silicon as well as of their complexes Special emphasis is placed on compiling the structures energetic properties identified electrical levels and spectroscopic signatures and the diffusion behavior from experimental and theoretical investigations In addition the book discusses the fundamental concepts of silicon and its defects the electron system diffusion thermodynamics and reaction kinetics which form the scientific basis needed for a thorough understanding of the text Therefore the book is able to provide an introduction to newcomers in this field up to a comprehensive reference for experts in process technology solid state physics and simulation of semiconductor processes Si Front-end Processing ,1999 **High Purity Silicon VI** Electrochemical Society. J. Shul,2001-04-09 Interest in wide bandgap semiconductors for high power high temperature electronics remains prominent For such applications SiC is by far the most mature semiconductor material GaN and diamond however have also become prime candidates While diamond has several advantages over the other two materials producing large single crystals as well as the inability to achieve n type doping have limited device fabrication For GaN recent advances in

crystal growth and processing capabilities as well as excellent transport properties have yielded a great deal of device development yet thermal conduction remains an issue SiC has excellent thermal conductivity high breakdown voltages and well developed substrates and processing techniques This book deals with a wide range of technical activity in the area of wide bandgap high power high temperature electronic devices and covers topics including the fabrication and performance of GaN based and SiC based devices as well as issues related to growth characterization and processing of wide bandgap materials Several summaries of the current status of the field are provided
