techniques for application domains such as medicine and social networks that face the increasing heterogeneity and complexity of new forms of data. Renowned authorities Enterprise Information Systems VII Chin-Sheng Chen, Joaquim Filipe, Isabel Seruca, José Cordeiro, 2007-09-20. This book contains the best papers of the Seventh International Conference on Enterprise Information Systems ICEIS 2005 held in Miami USA and organized by INSTICC Institute for Systems and Technologies of Information Communication and Control in collaboration with FLORIDA INTERNATIONAL UNIVERSITY who hosted the event. Following the route started in 1999 ICEIS has become a major point of contact between research scientists, engineers and practitioners on the area of business applications of information systems. This conference, which is now one of the largest annual conferences in the Information Systems area, has received an increased interest every year, especially from the international academic community. This year five simultaneous tracks were held covering different aspects related to enterprise computing including Databases and Information Systems, Integration, Artificial Intelligence and Decision Support Systems, Information Systems Analysis and Specification, Software Agents and Internet Computing, and Human Computer Interaction. The sections of this book reflect the conference tracks. ICEIS 2005 received 459 paper submissions from 41 different countries in all continents. 89 papers were published and orally presented as full papers, i.e. completed work. 110 position papers reflecting work in progress were accepted for short presentation and another 90 for poster presentation. These numbers leading to a full paper acceptance ratio below 20% show the intention of preserving a high quality forum.

**Database Semantics** Zahir Tari, Scott Stevens, 1998-12-31. Database Semantics: Semantic Issues in Multimedia Systems reflects the state of the art of emerging research on the meaning of multimedia information as presented during IFIP's Eighth Data Semantics Working Conference DS 8 organized by its Working Group 2.6 on Databases and held at Rotorua, New Zealand, in January 1999. DS 8 was planned as an active forum for researchers and practitioners focusing on those issues that involve the semantics of the information represented, stored and manipulated by multimedia systems. Depending on the topic and state of research, issues may be covered either deeply theoretically or quite practically or even both. These proceedings contain twenty-one papers carefully selected by an International Programme Committee and organized in six thematic areas: Video, Data Modelling and Use, Image Databases, Applications of Multimedia Systems, Multimedia Modeling in General, Multimedia Information Retrieval, Semantics and Metadata. For almost every area, important topics and issues include data modeling and query languages for media such as audio, video and images; methodological aspects of multimedia database design; intelligent multimedia information retrieval; knowledge discovery and data mining in multimedia information; multimedia user interfaces. Three visionary keynote addresses by famous experts Ramesh Jain, Hermann Maurer and Masao Sakauchi set the stage for discussion and future directions for the field. The collection of papers that resulted now offers a glimpse of the excitement and enthusiasm from DS 8. Database Semantics: Semantic Issues in Multimedia Systems is suitable as a secondary text for a graduate level course on database systems, multimedia systems or information retrieval systems and
