Natural Language Parsing Psychological Computational And Theoretical Perspectives:

Natural Language Parsing David R. Dowty, Lauri Karttunen, Arnold M. Zwicky, 2005-11-24 This is a collection of new papers by leading researchers on natural language parsing In the past the problem of how people parse the sentences they hear determine the identity of the words in these sentences and group these words into larger units has been addressed in very different ways by experimental psychologists by theoretical linguists and by researchers in artificial intelligence with little apparent relationship among the solutions proposed by each group However because of important advances in all these disciplines research on parsing in each of these fields now seems to have something significant to contribute to the others as this volume demonstrates The volume includes some papers applying the results of experimental psychological studies of parsing to linguistic theory others which present computational models of parsing and a mathematical linguistics paper on tree adjoining grammars and parsing

Handbook of Natural Language Processing Robert Dale, Hermann Moisl, Harold Somers, 2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics empirical corpus analysis and artificial neural networks It emphasizes the practical tools to accommodate the selected system

Framework and Resources for Natural Language Parser Evaluation Tuomo Kakkonen, 2007

Theoretical Issues in Natural Language Processing Yorick Wilks, 2018-10-24 Accompanying continued industrial production and sales of artificial intelligence and expert systems is the risk that difficult and resistant theoretical problems and issues will be ignored The participants at the Third Tinlap Workshop whose contributions are contained in *Theoretical Issues in Natural Language Processing* remove that risk They discuss and promote theoretical research on natural language processing examinations of solutions to current problems development of new theories and representations of published literature on the subject Discussions among these theoreticians in artificial intelligence logic psychology philosophy and linguistics draw a comprehensive up to date picture of the natural language processing field

Theoretical Syntax 1980-1990 Rosemarie Whitney Ostler, 1992-02-13 This volume is intended to be used by practicing scholars as well as students It represents all major and some of the minor trends that have evolved during the past decade Book titles from all available sources have been included as well as periodical articles from the major journals whenever there was evidence of a theoretical approach To ensure maximum accessibility of the entries listed books and articles in language other than English and unpublished dissertations and working papers have been excluded All entries are fully annotated and the volume is completed by indices of authors and subjects

Japanese Sentence Processing Reiko Mazuka, Noriko Nagai, 2013-05-13 This volume is a direct result of the International Symposium on Japanese Sentence Processing held at Duke University The symposium provided the first opportunity for researchers in three disciplinary areas from both Japan and the United States to participate in a conference where they could discuss issues concerning Japanese syntactic processing The goals of the symposium were three fold to illuminate the mechanisms of Japanese sentence processing from the viewpoints of linguistics

psycholinguistics and computer science to synthesize findings about the mechanisms of Japanese sentence processing by researchers in these three fields in Japan and the United States to lay foundations for future interdisciplinary research in Japanese sentence processing as well as international collaborations between researchers in Japan and the United States The chapters in this volume have been written from the points of view of three different disciplines with various immediate objectives from building usable speech understanding systems to investigating the nature of competence grammars for natural languages All of the papers share the long term goal of understanding the nature of human language processing mechanisms The book is concerned with two central issues the universality of language processing mechanisms and the nature of the relation between the components of linguistic knowledge and language processing This volume demonstrates that interdisciplinary research can be fruitful and provides groundwork for further research in Japanese sentence processing

Sentence Comprehension David J. Townsend, Thomas G. Bever, 2001 Using sentence comprehension as a case study for all of cognitive science David Townsend and Thomas Bever offer an integration of two major approaches the symbolic computational and the associative connectionist The symbolic computational approach emphasizes the formal manipulation of symbols that underlies creative aspects of language behavior The associative connectionist approach captures the intuition that most behaviors consist of accumulated habits The authors argue that the sentence is the natural level at which associative and symbolic information merge during comprehension The authors develop and support an analysis by synthesis model that integrates associative and symbolic information in sentence comprehension This integration resolves problems each approach faces when considered independently The authors review classic and contemporary symbolic and associative theories of sentence comprehension and show how recent developments in syntactic theory fit well with the integrated analysis by synthesis model They offer analytic experimental and neurological evidence for their model and discuss its implications for broader issues in cognitive science including the logical necessity of an integration of symbolic and connectionist approaches in the field

Signal to Syntax James L. Morgan, Katherine Demuth, 2014-01-14 In the beginning before there are words or syntax or discourse there is speech Speech is an infant's gateway to language Without exposure to speech no language or at most only a feeble facsimile of language develops regardless of how rich a child's biological endowment for language learning may be But little is given directly in speech not words for example as anyone who has ever listened to fluent conversation in an unfamiliar language can attest Rather words and phrases or rudimentary categories or whatever other information is required for syntactic and semantic analyses to begin operating must be pulled from speech through an infant's developing perceptual capacities By the end of the first year an infant can segment at least some words from fluent speech Beyond this how impoverished or rich an infant's representations of input may be remains largely unknown Clearly in the debate over determinants of early language acquisition the input speech stream has too often been offhandedly dismissed as a potential source of information This volume brings together internationally known scholars from a

range of disciplines linguistics psychology cognitive and computer science and acoustics who share common interests in how speech in its phonological prosodic distributional and statistical properties may encode information useful for early language learning and how such information may be deciphered by very young children These scholars offer a spectrum of viewpoints on the possibility that aspects of speech may provide bootstraps for language learning contribute important state of the art findings across a variety of relevant domains and illuminate critical directions for future inquiry The publication of this volume represents a significant step in renewing the bonds between two fields that have long been sundered speech perception and language acquisition

Discourse Comprehension Charles A. Weaver, III, Suzanne Mannes, C. Randy Fletcher, 2012-12-06 This volume is derived from presentations given at a conference hosted in Boulder Colorado in honor of the 60th birthday of Walter Kintsch Though the contents of the talks and thus the chapters varied widely all had one thing in common they were inspired to some degree by the work of Walter Kintsch When making plans for an edited book centered around this conference the editors had a primary goal to acknowledge the wide variety of researchers and research areas Kintsch had influenced As a consequence one of the more unusual elements of this volume is the diversity of the contributors Researchers from six different countries contributed chapters to this book which is loosely organized around three main thrusts of Kintsch's work text based representations that explain how meaning in a text is constructed situation models which represent what the text is about rather than what a text literally says and the construction integration model Kintsch's most recent work in discourse comprehension

Attribute Grammars and Their Applications Pierre Deransart, Martin Jourdan, 1990-09-07 Proceedings

Survey of the State of the Art in Human Language Technology Giovanni Battista Varile, Antonio Zampolli, 1997 Originally published in 1997 this book is concerned with human language technology This technology provides computers with the capability to handle spoken and written language One major goal is to improve communication between humans and machines If people can use their own language to access information working with software applications and controlling machinery the greatest obstacle for the acceptance of new information technology is overcome Another important goal is to facilitate communication among people Machines can help to translate texts or spoken input from one human language to the other Programs that assist people in writing by checking orthography grammar and style are constantly improving This book was sponsored by the Directorate General XIII of the European Union and the Information Science and Engineering Directorate of the National Science Foundation USA

Dependency Structures from Syntax to Discourse Hongxin Zhang, 2023-09-28 Based on the large corpora of journalistic English this title examines dependency relations and related properties at both syntactic and discourse levels seeking to unravel the language patterns of real life usage With a focus on rank frequency distribution the author investigates the distribution of linguistic properties units from the perspectives of properties motifs and sequencings At the syntactic level the book analyses the following three dimensions various combinations of a complete dependency structure valency and dependency distance At the discourse

level it proves that the elements can also form dependency relations by exploring 1 the rank frequency distribution of Rhetorical Structure Theory relations their motifs discourse valency and discourse dependency distance 2 whether there is top down organisation or an inverted pyramid structure at all the three discourse levels and 3 whether discourse dependency distances and valencies are lawfully distributed following the same distribution patterns as those at the syntactic level This book will be of great value for scholars and students of quantitative linguistics and computational linguistics and its practical insights will also benefit professionals of language teaching and journalistic writing
