## **Natural Selection Of Autonomy:**

*The Natural Selection of Autonomy* Bruce N. Waller, 1998 By examining autonomy on a larger scale in the natural world The Natural Selection of Autonomy clears away the mysteries associated with autonomy claims and shows what is valuable and adaptive for humans and other animals in genuine open alternatives and how human reason strengthens rather than creates autonomous behavior Drawing on recent research in biology psychology and philosophy The Natural Selection of Autonomy attacks widely shared and deeply held beliefs that have passed from the historical pre Darwinian philosophical tradition into contemporary thought and offers a clear look at the evolution of autonomous moral behavior among many species including but not limited to human animals

**Current Perspectives on Sexual Selection** Thierry Hoquet, 2015-01-28 This root and branch re evaluation of Darwin s concept of sexual selection tackles the subject from historical epistemological and theoretical perspectives Contributions from a wealth of disciplines have been marshaled for this volume with key figures in behavioural ecology philosophy and the history of science adding to its wide ranging relevance Updating the reader on the debate currently live in behavioural ecology itself on the centrality of sexual selection and with coverage of developments in the field of animal aesthetics the book details the current state of play while other chapters trace the history of sexual selection from Darwin to today and inquire into the neurobiological bases for partner choices and the comparisons between the hedonic brain in human and non human animals Welcome space is given to the social aspects of sexual selection particularly where Darwin drew distinctions between eager males and coy females and rationalized this as evolutionary strategy Also explored are the current definition of sexual selection as opposed to natural selection and its importance in today s biological research and the impending critique of the theory from the nascent field of animal aesthetics As a comprehensive assessment of the current health or otherwise of Darwin s theory 140 years after the publication of his *Descent of Man* the book offers a uniquely rounded view that asks whether sexual selection is in itself a progressive or reactionary notion even as it explores its theoretical relevance in the technical biological study of the twenty first century

*From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms* Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of

natural selection Paradoxically Darwins theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher s Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics Publisher s description

working with families      **Commonsense Darwinism** John Lemos,2015-11-09 Written in a simple accessible style Commonsense Darwinism offers a clear critical examination of the subject Assuming that the diversity of life including human beings is the result of evolution from common origins and that its driving force is natural selection the book explores what this might mean for issues in ethics philosophy of religion epistemology and metaphysics The author s defense of free will makes this an especially stimulating read      **Concepts, Theories, and Rationality in the Biological Sciences** Gereon Wolters,2022-05-31 A Unified Report on the State of the Art in the Philosophy of Biology In October 1993 the University of Pittsburgh hosted the Second Pittsburgh Konstanz Colloquium in the Philosophy of Science with a focus on the rapidly growing field of philosophy of biology An interdisciplinary group of philosophers and scientists came together to discuss the basic theories and concepts of biology and their connections with ethics economics and psychology The colloquium organizers strove to create an event that would provide attendees with a wide overview on the current state of the philosophy of biology with as many topics and views on these topics as possible Those presentations are gathered here in a volume that offers the reader a varied and thorough survey of the field      Natural Selection's Paradox Carter Stroud,2008-08-21 An important addition to understanding natural selection these essays redefine wealth and identify a sustainable spirituality using the perspectives of scientific research and historical wisdom      **Beyond Natural Selection** Robert G. **Evolutionary Systems** G. Vijver, Stanley N. Salthe, M. Delpos, 2013-04-17 The three well known revolutions of the past centuries the Copernican the Darwinian and the Freudian each in their own way had a deflating and mechanizing effect on the position of humans in nature They opened up a richness of disillusion earth acquired a more modest place in the universe the human body and mind became products of a long material evolutionary history and human reason instead of being the central immaterial locus of understanding was admitted into the theater of discourse only as a materialized and frequently out of control actor Is there something objectionable to this picture Formulated as such probably not Why should we resist the idea that we are in certain ways and to some degree physically biologically or psychically determined Why refuse to acknowledge the fact that we are materially situated in an ever evolving world Why deny that the ways of inscription traces of past events and processes are co determinative of further evolutionary pathways Why minimize the idea that each intervention of each natural being is temporally and materially situated and has as such the inevitable consequence of changing the world The point is however that there are many more or less radically different ways to consider the mechanization of man and nature There are in particular many ways to get the message of material and

evolutionary determination as well as many levels at which this determination can be thought of as relevant or irrelevant

**Downward Causation and the Neurobiology of Free Will** Nancey Murphy, George Ellis, Timothy O'Connor, 2009-09-23  
How is free will possible in the light of the physical and chemical underpinnings of brain activity and recent neurobiological experiments How can the emergence of complexity in hierarchical systems such as the brain based at the lower levels in physical interactions lead to something like genuine free will The nature of our understanding of free will in the light of present day neuroscience is becoming increasingly important because of remarkable discoveries on the topic being made by neuroscientists at the present time on the one hand and its crucial importance for the way we view ourselves as human beings on the other A key tool in understanding how free will may arise in this context is the idea of downward causation in complex systems happening coterminously with bottom up causation to form an integral whole Top down causation is usually neglected and is therefore emphasized in the other part of the book's title The concept is explored in depth as are the ethical and legal implications of our understanding of free will This book arises out of a workshop held in California in April of 2007 which was chaired by Dr Christof Koch It was unusual in terms of the breadth of people involved they included physicists neuroscientists psychiatrists philosophers and theologians This enabled the meeting and hence the resulting book to attain a rather broader perspective on the issue than is often attained at academic symposia The book includes contributions by Sarah Jayne Blakemore George F R Ellis Christopher D Frith Mark Hallett David Hodgson Owen D Jones Alicia Juarrero J A Scott Kelso Christof Koch Hans K ng Hakwan C Lau Dean Mobbs Nancey Murphy William Newsome Timothy O Connor Sean A Spence and Evan Thompson

**Renewing Liberalism** James A. Sherman, 2016-04-19 This book develops an original and comprehensive theory of political liberalism It defends bold new accounts of the nature of autonomy and individual liberty the content of distributive justice and the justification for the authority of the State The theory that emerges integrates contemporary progressive and pluralistic liberalism into a broadly Aristotelian intellectual tradition The early chapters of the book challenge the traditional conservative idea of individual liberty the liberty to dispose of one's property as one wishes and replace it with a new one according to which liberty is of equal value to all persons regardless of economic position The middle chapters present an original theory of socio economic justice arguing that a society in which every citizen enjoys an equal share of liberty should be the distributive goal of the State It is argued that this goal is incompatible with the existence of large disparities in wealth and economic power and that contra conservative and libertarian economic arguments such disparities are harmful to the overall health of national and global economies The final chapters provide an original argument that the State has both a moral duty and a moral right to pursue this program of socio economic justice contra conservative and libertarian moral arguments and that only the measures necessary to implement this program lie within the morally justifiable limits on the State's authority Though primarily a political work it spans most areas of practical philosophy including ethical social and legal theory and meta ethics moral psychology and action theory And though fundamentally a

philosophical work it incorporates research from a number of fields including decision theory economics political science and jurisprudence primatology neuroscience and psychology and history anthropology sociology and ecology and is sure to be of interest to a wide range of scholars and students *Conflict in Nagorno-Karabakh, Abkhazia and South Ossetia* Tim

Potier,2021-12-28 The conflicts in the South Caucasus are now a decade old but still appear impervious to solution The hopes that independence raised have been dashed by an insidious cocktail of past and present regional hegemony historical antipathy and Soviet planning Armenia Azerbaijan and Georgia thus continue to wait for their long awaited Spring In a region where Western academic writing has focussed during the last decade almost exclusively on the dynamics of regional security and Great Power rivalry even in the context of conflict this volume provides an important and necessary legal appraisal of the possible processes and structures which may ultimately facilitate the finding of constitutional settlement in Nagorno Karabakh Abkhazia and South Ossetia In the work Tim Potier an academic lawyer with much experience in the Caucasus has written a powerful but dispassionate account which will prove not only to be of use to academics diplomats and government officials working in the region but also be of lasting value to the ongoing development of the international law on self determination and autonomy Dr Potier also considers the fate of what he prefers to term regionally non dominant titular peoples **The Philosophy of Biology** Marjorie Grene,David Depew,2004-08-02 Is life different from the non living If so

how And how in that case does biology as the study of living things differ from other sciences These questions are traced through an exploration of episodes in the history of biology and philosophy The book begins with Aristotle then moves on to Descartes comparing his position with that of Harvey In the eighteenth century the authors consider Buffon and Kant In the nineteenth century the authors examine the Cuvier Geoffroy debate pre Darwinian geology and natural theology Darwin and the transition from Darwin to the revival of Mendelism Two chapters deal with the evolutionary synthesis and such questions as the species problem the reducibility or otherwise of biology to physics and chemistry and the problem of biological explanation in terms of function and teleology The final chapters reflect on the implications of the philosophy of biology for philosophy of science in general *Thomas Carlyle and the Idea of Influence* Megan Dent,Paul E. Kerry,Albert D.

Pionke,2018-06-20 That Thomas Carlyle was influential in his own lifetime and continues to be so over 130 years after his death is a proposition with which few will disagree His role as his generation s foremost interpreter of German thought his distinctive rhetorical style his approach to history via the innumerable biographies of great men and his almost unparalleled record of correspondence with contemporaries both great and small makes him a necessary figure of study in multiple fields *Thomas Carlyle and the Idea of Influence* positions Carlyle as an ideal representative figure through which to study that complex interplay between past and present most commonly referred to as influence Approached from a theoretically ecumenical perspective by the volume s introduction and eighteen essays influence is itself refigured through a number of complementary metaphorical frames influence as organic inheritance influence as aesthetic infection influence as palimpsest

influence as mythology influence as network and more Individual essays connect Carlyle with the persons and publications of Mathilde Blind Orestes Brownson John Bunyan G K Chesterton Benjamin Disraeli George Eliot T S Eliot Ralph Waldo Emerson Johann Wolfgang von Goethe James Joyce William Keenan Windham Lewis Jules Michelet John Stuart Mill Robert Owen Spencer Stanhope John Sterling and others Considered as a whole Thomas Carlyle and the Idea of Influence assembles a web of conceptual and intertextual connections that both challenges received understandings of influence itself and establishes a standard by which to measure future assertions of Carlyle's enduring intellectual legacy in the twenty first century and beyond

**Natural Philosophy** Alister E. McGrath, 2022-10-13 Recovering the forgotten discipline of Natural Philosophy for the modern world This book argues for the retrieval of natural philosophy a concept that faded into comparative obscurity as individual scientific disciplines became established and institutionalized Natural philosophy was understood in the early modern period as a way of exploring the human relationship with the natural world encompassing what would now be seen as the distinct disciplines of the natural sciences mathematics music philosophy and theology The first part of the work represents a critical conversation with the tradition identifying the essential characteristics of natural philosophy particularly its emphasis on both learning about and learning from nature After noting the factors which led to the disintegration of natural philosophy during the nineteenth century the second part of the work sets out the reasons why natural philosophy should be retrieved and a creative and innovative proposal for how this might be done This draws on Karl Popper's Three Worlds and Mary Midgley's notion of using multiple maps in bringing together the many aspects of the human encounter with the natural world Such a retrieved or re imagined natural philosophy is able to encourage both human attentiveness and respectfulness towards Nature while enfolding both the desire to understand the natural world and the need to preserve the affective imaginative and aesthetic aspects of the human response to nature
