71. I will now proceed to notice some of the animals of this family. At the head of it, and of the wild beasts generally, stands the Lion. He is commonly called the

king of beasts, both for his noble and commanding air, and the power concentrated in his comparatively small frame. No animal, however large, dare attack him. He is found in Africa, and on the Continent of Asia, in India, Persia, and Arabia. He preys upon antelopes, buffaloes, ibexes, gazelles, etc. There is such prodigious strength in the muscles of his neck and jaws that he can carry off a heifer as easily as a cat can a rat. He generally waits in ambush for his victim, or creeps like a cat insidiously and noiselessly toward it, and, when sufficiently near, at one bound seizes it with his teeth and claws, uttering, at the same time, his terrific roar. He is not properly

styled king of the forest, for he frequents burning desert plains, or places covered with low brushwood. He commonly sleeps in the day, and at night roams to search for prey. A thunder-storm, so common in the night in Southern Africa, seems to excite him to unwonted activity, and, mingling his roar with that of the thunder, he rushes upon his terrified and confused prey without his usual stealthiness. The Lioness is smaller than the Lion, as you see in Fig. 35 (p. 46), and is destitute of the mane which gives him so dignified an appearance. The cubs, of which there are commonly from two to four, are as playful as kittens. Mr. Wood says that he had two cubs, larger than cats, placed in his arms, and found them "almost unpleasantly playful."

72. The Tiger, Fig. 36, is found only in Asia, chiefly in
