Nature And Ontogenesis Of Meaning:

The Nature and Ontogenesis of Meaning Willis F. Overton, David Stuart Palermo, 2024 Throughout its evolution Piaget's theory has placed meaning at the center of all attempts to understand the nature and development of knowing For Piaget all knowing whether sensorimotor representational or reasoned and whether directed toward successful problem solutions or toward general understanding is necessarily a construction which arises out of meaning making activity It was in this context that the editors of this volume originally published in 1994 approached the board of directors of the Jean Piaget Society with a proposal to organize a recent annual symposium around the topic of the nature and development of meaning In forming this symposium and in moving from symposium to integrated text the editors wanted to insure both a breadth and depth to the analysis of the topic Addressing philosophical theoretical and empirical perspectives this issue oriented volume provides an integrated exploration of the current understanding of the nature and development of meaning Contemporary issues that frame alternative understandings of the nature of meaning nativist vs constructivist positions and computational vs embodied mind contexts are examined as they impact on the investigation of meaning Comparative cognitive and linguistic developmental dimensions of meaning are described and discussed

Nature and Nurture Cynthia Garcia Coll, Elaine L. Bearer, Richard M. Lerner, 2014-04-04 What does it mean to find a gene or set of genes that are associated with ADHD schizophrenia or autism Could we eradicate such diseases from our species through gene therapy Is it possible to eradicate from our genome the genetic material that predisposes us to be too aggressive too shy less intelligent or not active enough Who has the political power and or moral authority to make these decisions The premise of *Nature and Nurture* is that the complexity of the transactions between nature and nurture between genes and the environment from the cellular to the cultural level make these questions incredibly complex and in need of careful attention by educators scientists the public and policymakers A product of the conference held at Brown University in 2001 this book suggests that genes and environments work together interactively in a complex and closely intertwined fashion The contributors to this book biologists psychologists psychiatrists and economists present knowledge that enables research and application to transcend the traditional question of whatever variance or significance is attributed to genetics versus environment in the development of a particular behavioral trait This book presents a variety of views on the current status of knowledge about the ways in which dynamic developmental mutually interactive systems in the genetic and environmental domains operate The chapters represent contributions from different perspectives

Meanings of War and Peace Francis A. Beer, 2001 When the stakes of public words and actions are global and permanent and especially when they involve war and peace can we afford not to seek their meaning For three decades Francis Beer has pioneered the effort to discover describe and connect pieces of the complex puzzle of war peace their interrelationship and their causes In this volume Beer joined by colleagues as co authors of some chapters examines the cognitive behavioral and linguistic dimensions of war and peace Language he shows is

important because it mediates between thought and action It expresses beliefs about war and peace and affects the perceptions of potential adversaries about one's own intentions Using multiple perspectives and methods he explores the uses of communication in international relations and the development of meaning for war and peace In this unique and innovative post realist analysis Beer examines how language transmits and creates meaning through interaction with specific audiences His case studies include the Somalian intervention Sarajevo and the Balkan conflict and the Gulf War Moving beyond the discrete words of war the book takes a broader view of how political participants interact in war and peace through continuous streams of communication that reflect and construct worlds of meaning This stimulating and challenging volume brings together insights and evidence from political science cognitive psychology linguistics history and rhetorical studies and applies them in a focused way to the problem of war and peace

Literary Intention, Literary Interpretations, and Readers John Maynard, 2009-04-17 This accessible personal and provocative study returns to the major subject in literary discussion before and during the relatively recent flourishing of literary theory that of literary intention Does the author's personal intention or historical site determine a correct interpretation of a literary work Probing the entire range of issues connected with this many faceted and knotty concept this book engages with interpretation on both theoretical and practical levels It argues that the hard questions about interpretation connected to issues of intention cannot be sidestepped or ignored It does not argue for conservative concepts of literature itself nor against the major historical engagements of critics in our time But in addressing those who continue to read or teach literature it does insist on a level of sophistication in issues of literary interpretation that cannot be assured by historical research and knowledge of the social and cultural connections to literary works The overall aim of the work is to recall readers to the great complexity pleasure and interest of literary interpretation

Movement and Action in Learning and Development Ida Stockman, 2004-08-13 This book presents theories and clinical practices for dealing with children diagnosed with pervasive developmental disability or PDD These are children who have a wide range of disabilities that affect their participation in even the most routine events of daily life such as eating dressing bathing and so on Unlike many who are diagnosed with classic autism however these children seem to have normal social behavior normal physical appearance the ability to learn hear see and move their bodies at will in other words none of the well known reasons that cause autistic and other children to develop differently These children have the use of all their senses but their brains are unable to process the information that is fed through them While much new research is being done in genetics and neurobiology to explain why something in these children has gone fundamentally wrong with their development clinicians and therapists who deal with them on a daily basis have needed to develop practical therapies based on how the children react to their environments Movement and Action in Learning and Development suggests that when therapists plan treatment strategies children's experiences and interactions with the world should be given the same consideration as the

limits of their biological makeups Too often children diagnosed with PDD are lumped into therapy groups for the classically autistic where the focus tends to be on the distance senses hearing and vision Case studies presented in the first half of the book suggest that for children with PDD there is a disconnect between the brain and the tactile kinesthetic senses that involve body movement and physical interaction with the world Movement in turn seems to be connected to perception interpretation of the world around and ultimately the acquisition of knowledge For children with PDD normal learning seems to be limited not only by their tactile kinesthetic sense but also by the lack of collaboration between all the senses The second half of the book demonstrates how these new theories translate into clinical practices
