the modernist idea of nature as being external to the human experience a nature that can be mastered by engineers and scientists from outside the cosmopolitical thinking offers designers to embark in an active process of manipulating and reworking nature from within To engage in cosmopolitics this book argues means to redesign create instigate and compose every single feature of our common experience In the light of this new understanding of nature we set the questions What is the role of design if nature is no longer salient enough to provide a background for human activities How can we foster designers own force and make present what causes designers to think feel and act How do designers make explicit the connection of humans to a variety of entities with different ontology rivers species particles materials and forces How do they redefine political order by bringing together stars prions and people In effect how should we understand design practice in its relation to the material and the living world In this volume anthropologists science studies scholars political scientists and sociologists rethink together the meaning of cosmopolitics for design At the same time designers architects and artists engage with the cosmopolitical question in trying to imagine the future of architectural and urban design The book contains original empirical chapters and a number of revealing interviews with artists and designers whose practices set examples of cosmopolitically correct design

McMahon,Tadashi Fukami,2006-07-19 The conservation threat represented by invasive species is well known but the scientific opportunities are underappreciated Invasion studies have historically been largely directed at the important job of collecting case studies Invasion biology has matured to the point of being able to incorporating itself into the
