Nature Western Attitudes Since Ancient Times Themes In History:

Nature Peter Coates,1998 Nature is a deceptively simple and ahistorical term suggesting intrinsic unchanging reality Yet nature has a history too both in terms of human attitudes and human impacts Coates outlines the major understandings of nature in the western world since classical times from nature as higher authority to its more recent meaning of threatened physical space and life forms Unlike many others this book places the history of attitudes to nature within the story of human induced changes in the material environment And few others take a supranational perspective or cross the divides between historical eras A distinctive unifying theme is Coates s interest in how green writers over the last thirty years have interpreted our past dealings with nature specifically their efforts to diagnose the roots of contemporary ecological problems and their search for ancestors He concludes with a discussion of the future of nature in the context of developments such as the new ecology global warming advances in genetic engineering and research on animal behaviour Assuming no previous knowledge Nature provides the reader with an accessible synthesis and introduction to some of environmental history s central features and debates confirming its status as one of the most enthralling current pursuits within historical studies This will be essential reading for second year undergraduates and above in cultural history and environmental history as well as to the general reader interested in environmental issues

Nature Peter Coates,1998 Beginning with Roman times Coates lifts the veil off nature and reveals the ideological and material factors that have influenced human perceptions of attitudes toward and uses of nature notably religion and ethics science technology economics gender and ethnicity *Disease and the Modern World: 1500 to the Present Day* Mark Harrison,2013-05-02 Mark Harrison s book illuminates the threats posed by infectious diseases since 1500

He places these diseases within an international perspective and demonstrates the relationship between European expansion and changing epidemiological patterns The book is a significant introduction to a fascinating subject Gerald N Grob Rutgers State University In this lively and accessible book Mark Harrison charts the history of disease from the birth of the modern world around 1500 through to the present day He explores how the rise of modern nation states was closely linked to the threat posed by disease and particularly infectious epidemic diseases He examines the ways in which disease and its treatment and prevention changed over the centuries under the impact of the Renaissance and the Enlightenment and with the advent of scientific medicine For the first time the author integrates the history of disease in the West with a broader analysis of the rise of the modern world as it was transformed by commerce slavery and colonial rule Disease played a vital role in this process easing European domination in some areas limiting it in others Harrison goes on to show how a new environment was produced in which poverty and education rather than geography became the main factors in the distribution of disease Assuming no prior knowledge of the history of disease Disease and the Modern World provides an invaluable introduction to one of the richest and most important areas of history It will be essential reading for all undergraduates and postgraduates taking courses in the history of disease and medicine and for anyone interested in how disease has shaped and has been shaped by the modern world *A Companion to Global Environmental History* J. Whyte, 2004-03-03 *Landscape and History* explores a complex relationship over the past five centuries The book is international and interdisciplinary in scope drawing on material from social economic and cultural history as well as from

geography archaeology cultural geography planning and landscape history In recent years as the author points out there has been increasing interest in and concern for many aspects of landscape within British European and wider contexts This has included the study of the history development and changes in our perception of landscape as well as research into the links between past landscapes and political ideologies economic and social structures cartography art and literature There is also considerable concern at present with the need to evaluate and classify historic landscapes and to develop policies for their conservation and management in relation to their scenic heritage and recreational value This is manifest not only in the designation of particularly valued areas with enhanced protection from planning developments such as national parks and world heritage sites but in the countryside more generally Further Ian D Whyte argues changes in European Union policies relating to agriculture with a greater concern for the protection and sustainable management of rural landscapes are likely to be of major importance in relation to the themes of continuity and change in the landscapes of Britain and Europe **A**

Non-Philosophical Theory of Nature A. Smith, 2013-07-18 Utilizing Francois Laruelle's non philosophical method Smith constructs a unified theory of philosophical theology and ecology by challenging environmental philosophy and theology claiming that engagement with scientific ecology can radically change the standard metaphysics of nature as well as ethical problems related to the natural **Scarred Landscapes** C. Pearson, 2008-10-31 Based on detailed archival research and site visits Scarred Landscapes is the first environmental history of Vichy France From mountains and marshlands to foresters and resisters it examines the intricate and often surprising connections between war history and the natural environment during these turbulent years **Law and Ecology** Richard O. Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law **Birds in the Ancient World** Jeremy Mynott, 2018-05-10 Birds pervaded the ancient world impressing their physical presence on the daily experience and imaginations of ordinary people and figuring prominently in literature and art They provided a fertile source of symbols and stories in myths and

folklore and were central to the ancient rituals of augury and divination Jeremy Mynott's *Birds in the Ancient World* illustrates the many different roles birds played in culture as indicators of time weather and the seasons as a resource for hunting eating medicine and farming as domestic pets and entertainments and as omens and intermediaries between the gods and humankind We learn how birds were perceived through quotations from well over a hundred classical Greek and Roman authors all of them translated freshly into English through nearly 100 illustrations from ancient wall paintings pottery and mosaics and through selections from early scientific writings and many anecdotes and descriptions from works of history geography and travel Jeremy Mynott acts as a stimulating guide to this rich and fascinating material using birds as a prism through which to explore both the similarities and the often surprising differences between ancient conceptions of the natural world and our own His book is an original contribution to the flourishing interest in the cultural history of birds and to our understanding of the ancient cultures in which birds played such a prominent part

Beastly Questions Naomi Sykes, 2014-08-28 Zooarchaeology or the study of ancient animals is a frequently side lined subject in archaeology This is bizarre given that the archaeological record is composed largely of debris from human animal relationships be they in the form of animal bones individual artifacts or entire landscapes and that many disciplines including anthropology sociology and geography recognise human animal interactions as a key source of information for understanding cultural ideology By integrating knowledge from archaeological remains with evidence from texts iconography social anthropology and cultural geography *Beastly Questions: Animal Answers to Archaeological Issues* seeks to encourage archaeological students researchers and those working in the commercial sector to offer more engaging interpretations of the evidence at their disposal Going beyond the simple confines of what people ate this accessible but in depth study covers a variety of high

Northern Europe Tamara L. Whitelock, Jens Ivo

Engels, Richard C. Hoffmann, Hilde Ibsen, Wybren Versteegen, 2005-08-19 A fascinating handbook providing a rare synthesis of the environmental history of northern Europe from the Paleolithic era to the present day Of interest to students and academics alike this book provides a much needed synthesis of the recent literature on northern Europe's environmental history Beginning with the Paleolithic period and the recolonization of Europe after the Ice Age this book maps out the key environmental trends in the history of the region's environment and its interaction with the human population The book also highlights how dramatic events outside Europe such as the Tambora volcanic eruption in Indonesia in 1815 had dramatic consequences for the region's climate Given the culturally diverse nature of modern Europe a vital aspect of the book is its identification of the common themes that unite the interaction of the region's nation states with the natural environment Part of ABC CLIO's Nature and Human Societies series the book enables readers to better grasp the extent of humanity's effect on our world

And a Time to Die Sharon Kaufman, 2005-04-19 A reassuring and illuminating examination on our conflicting wishes about the end of life how the politics and routines of the American hospital have formed our understanding and experience of death and ultimately why what we consider a good death is so hard to attain In a penetrating and revelatory study medical anthropologist Dr Sharon Kaufman uses two years of intensive observations and interviews with scores of patients family members physicians nurses social workers and other staff at several community hospitals in California to explore the heart of a science driven yet fractured and often irrational world of health care delivery where empathetic yet frustrated hard working yet constrained professionals both respond to and create the anxieties and often inchoate expectations of patients

and families who must make decisions they are ill prepared to make She sought out the critically ill the dying and their friends and relatives She followed patients from admission to death days weeks or sometimes months later through what is often for them and their families a Kafka esque journey She asked hospital staff what they were doing and why and stood beside doctors and nurses observing their work cynicism compassion and frustration And she paid close attention to the most important player of all the hospital bureaucracy and how it impacts the manner and timing of patient death Her investigative research links together the emotional experiences of patients and families the dedicated work of hospital staff and the ramifications of institutional bureaucracy to show the invisible power of the hospital system itself its rules mandates and daily activity in organizing death and individual experience of it The book is the story of real patients and their families an account of what drives the American hospital today and a report on the complex sources and implications of doing something about death
