Finnegan,2016-09-12 The relationship between science and civil society is essential to our understanding of cultural change during the Victorian era Science was frequently packaged as an appropriate form of civic culture inculcating virtues necessary for civic progress In turn civic culture was presented as an appropriate context for enabling and supporting scientific progress Finnegan s study looks at the shifting nature of this process during the nineteenth century using Scotland as the focus for his argument Considerations of class religion and gender are explored illuminating changing social identities as public interest in science was allowed even encouraged beyond the environs of universities and elite metropolitan societies **Scottish Naturalist and Journal of the Perthshire Society of Natural Science** ,1913 *Principles of Spiritual Science* Carl Unger,1998-10-20 This slim but challenging volume of three essays supports and extends the basis of Steiner s philosophical and anthroposophical thinking Students seeking a secure foundation in the supersensible realities of which Steiner speaks will find here a continuing source of inspiration Unger was asked by Steiner to work further with the spiritual scientific theory of knowledge This volume is the essence of what he did in this field *Early Chinese Work in Natural Science* Joseph C.Y. Chen,1996-03-01 This book re

examines the nature of early Chinese work in natural science on the basis of original records analysis and artifacts discovered in recent decades by archaeological explorations of China's past. It presents a concise account of early scientific ideas and thoughts of nature and their effect on the development of natural science. It is suggested that the traditional characterization of early Chinese work in natural science requires substantial modification. The absence of early Chinese participation in the development of modern science is not as commonly assumed a consequence of lacking early scientific tradition in ancient China. It is argued that the concept of inhibitive factors is dubious without taking their dynamical relationships into account and that socio-economical and political influence has to be considered when seeking answers to the major setbacks in science and technology in China. The book also shows that there is no basis for the claims saying that acoustics and astronomy in China have their roots in Babylon.
