benign but clinically aggressive tumors exhibiting a high propensity for local invasion into the hypothalamus optic and vascular structures These tumors as well as the current treatments may result in pan hypopituitarism diabetes insipidus morbid obesity followed by type II diabetes mellitus blindness as well as serious behavioral and psychosocial impairments Exploring in detail advances in both the understanding of tumor biology as well as clinical advances in patient management are explored in detail this book will also look towards potential new treatment approaches Basic Research and Clinical Aspects of Adamantinomatous Craniopharyngioma is the first book compiling all current research on ACPs Mouse and human studies have unequivocally demonstrated that mutations in CTNNB1 encoding catenin underlie the etiology of the majority if not all ACP tumors Genetic studies in mice have shown that ACPs are tumors of the pituitary gland and not of the hypothalamus as previously thought and are derived from Rathke's pouch precursors In addition a role for tissue specific adult pituitary stem cells has been revealed as causative of ACP Together these studies have provided novel insights into the molecular and cellular etiology as well as the pathogenesis of human ACP Finally this volume covers new treatment approaches that have been shown to be effective both in reducing ACP burden as well as reducing the morbidity associated with therapy

Pancreatoduodenectomy Fujio Hanyu, Ken Takasaki, 2012-12-06 Alessandro Condivilla of Bologna first attempted a resection of the head of the pancreas in 1898 but several decades of further trial and error attempts ensued before the prototype procedure of pancreatoduodenectomy PD was established by Whipple in 1935 In the half century following that landmark refinements of surgical technique including pancreatico and bilio entero anastomosis as well as development of new technology to support perioperative management and patient care have contributed to the decrease in mortality and morbidity rates for obstructive jaundice and pancreatic fistula The improvement in mortality and morbidity rates associated with PD has led to an increase in the number of patients undergoing the procedure and in the number of institutions performing it Indications for PD have also been expanded In the early years after PD was established as a viable procedure periampullary carcinoma was the most common indication now PD is indicated for a number of benign and malignant diseases Some surgeons believe that PD is the procedure of choice for certain types of chronic pancreatitis pancreatico biliary maljunction and pancreatic and duodenal trauma Other surgeons have reported the necessity of PD for lymph node dissection of gallbladder carcinoma Consequently the basic procedure has been greatly modified to accommodate the specific conditions of each disease For patients with malignancy extended procedures have been developed to improve the curative resection rate and ensure complete lymph node dissection
