## **Oculomotor Control And Cognitive Processes:**

Oculomotor Control and Cognitive Processes Roberto Schmid, Daniela Zambardi, 1991 This volume contains selected and edited papers from the fifth European Conference on Eye Movements ECEM 5 held at the University of Pavia Italy on September 10-13 1989 The volume is organized in six sections as follows Neurophysiology of Eye Movements Control of Eye Movements Eye Head Coordination Eye Movements in Pathology Eye Movements and Cognitive Processes and Applied Research The last section also contains some papers derived from the satellite symposium on Visual Processes and Eye Movements in Dyslexia which was organized by the Roding Remediation Foundation Processes of Visuospatial Attention and Working Memory Timothy Hodgson, 2019-11-19 This volume covers a broad range of current research topics addressing the function of visuospatial attention and working memory It discusses a variety of perspectives ranging from evolutionary and genetic underpinnings to neural substrates computational processes and the connection between attention and working memory Contributions address the topic at the molecular system and evolutionary scales and will be of interest to a range of audiences from animal behaviour specialists experimental psychologists to clinicians in the field of psychiatry and neurology

**Eye Movements and Their Role in Visual and Cognitive Processes** Eileen Kowler, 1990 This is the first book to deal exclusively with oculomotor performance in a series that up to this point has been devoted largely to reviews of research on oculomotor anatomy and physiology The publication of this volume signifies the recognition of the fact that a genuine understanding of eye movement will not come about through the study of neurons alone We need to know about the capacity to make different kinds of eye movement and about how such oculomotor capacity is used to accomplish different sorts of visual and cognitive tasks i.e. how the eye can move and why it moves in particular ways Research on respective topics was critically evaluated by the contributing authors resulting in a controversial and up to date appraisal of this subject

Cognitive Processes in Eye Guidance Geoffrey Underwood, 2005-07-28 Whether reading looking at a picture or driving how is it that we know where to look next how does the human visual system calculate where our gaze should be directed in order to achieve our cognitive aims This book brings together leading vision scientists studying eye movements across a range of activities such as reading driving computer activities and chess It provides groundbreaking new research that will help us understand how it is that we know where to move our eyes and thereby better understand the cognitive processes underlying these activities **Cognitive Ergonomics, Clinical Assessment and Computer-assisted Learning** P.J.

Beek, A.N. Brand, B.P.L.M. den Brinker, F.J. Maarse, L.J.M. Mulder, 1999-01-01 This first section of this book deals with cognitive ergonomics covering such topics as the design of graphical user interfaces and speech recognition facilities The second part of the book is dedicated to the increasingly popular field of computer assisted learning *Proceedings of the Twenty-first Annual Conference of the Cognitive Science Society* Martin Hahn, Scott C. Stoness, 2020-11-26 This book presents the complete collection of peer reviewed presentations at the 1999 Cognitive Science Society meeting including

papers poster abstracts and descriptions of conference symposia For students and researchers in all areas of cognitive science     **Emotion regulation and cognitive processes** Carmen Moret-Tatay,Vilfredo De Pascalis,2023-08-24

**Perception, Cognition, and Decision Training** Joan N. Vickers,2007 Joan Vickers presents evidence on gaze control within visual perception and action in sport as well as the science underlying decision training     *Visual Processes in Reading and Reading Disabilities* Dale M. Willows,Richard Kruk,Evelyne Corcos,2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership     Eye Guidance in Reading and Scene Perception G. Underwood,1998-07-16 The distinguished contributors to this volume have been set the problem of describing how we know where to move our eyes There is a great deal of current interest in the use of eye movement recordings to investigate various mental processes The common theme is that variations in eye movements indicate variations in the processing of what is being perceived whether in reading driving or scene perception However a number of problems of interpretation are now emerging and this edited volume sets out to address these problems The book investigates controversies concerning the variations in eye movements associated with reading ability concerning the extent to which text is used by the guidance mechanism while reading concerning the relationship between eye movements and the control of other body movements the relationship between what is inspected and what is perceived and concerning the role of visual control attention in the acquisition of complex perceptual motor skills in addition to the nature of the guidance mechanism itself The origins of the volume are in discussions held at a meeting of the European Society for Cognitive Psychology ESCOP that was held in Wurzburg in September 1996 The discussions concerned the landing effect in reading an effect that if substantiated would provide evidence of the use of parafoveal information in eye guidance and these discussions were explored in more detail at a small meeting in Chamonix in February 1997 Many of the contributors to this volume were present at the meeting but the arguments were not resolved in Chamonix either Other leaders in the field were invited to contribute to the discussion and this volume is the product The argument remains

unresolved but the problem is certainly clearer

**The Temporal Dynamics of Cognitive Processing** Timothy Michael Ellmore, Peter Ford Dominey, John Magnotti, 2016-07-26 From our ability to attend to many stimuli occurring in rapid succession to the transformation of memories during a night of sleep cognition occurs over widely varying time scales spanning milliseconds to days and beyond Cognitive processing is often influenced by several behavioral variables as well as nonlinear interactions between multiple neural systems This frequently produces unpredictable patterns of behavior and makes understanding the underlying temporal factors influencing cognition a fruitful area of hypothesis development and scientific inquiry Across two reviews a perspective and twelve original research articles covering the domains of learning memory attention cognitive control and social decision making this research topic sheds new light on the temporal dynamics of cognitive processing

**Eye Movements and Psychological Processes** Richard A. Monty, John W. Senders, 2017-03-27 In the 10 years prior to publication the quantity of research on eye movements as they pertain to psychological processes had been increasing at a rapid rate Originally published in 1976 the editors purpose was to bring together investigators representing different theoretical positions and methodological approaches to present their recent findings to debate the theoretical points of view and to identify and discuss the major research problems on eye movements at the time An attempt was made to invite participants ranging all the way from promising graduate students through the established authorities in the field The result was an intensive three day session with meetings from early morning until late into the evening with much opportunity for formal and informal group discussion The edited papers and transcripts of the discussions are the contents of this book

**Innovative Investigations of Language in Autism Spectrum Disorder** Letitia Naigles, 2016-11-07 In recent decades a growing number of children have been diagnosed with autism spectrum disorder ASD a condition characterized by among other features social interaction deficits and language impairment Yet the precise nature of the disorder s impact on language development is not well understood in part because of the language variability among children across the autism spectrum The contributors to this volume experts in fields ranging from communication disorders to developmental and clinical psychology to linguistics use innovative techniques to address two broad questions Is the variability of language development and use in children with ASD a function of the language such that some linguistic domains are more vulnerable to ASD than others Or is the variability a function of the individual such that some characteristics predispose those with ASD to have varying levels of difficulty with language development and use Contributors investigate these questions across linguistic levels from lexical semantics and single clause syntax to computationally complex phonology and the syntax pragmatics interface Authors address both spoken and written domains within the wider context of language acquisition This timely and broadly accessible volume will be of interest to a broad range of specialists including linguists psychologists sociologists behavioral neurologists and cognitive neuroscientists
