Oeuvre scientifique Józef Babinski,1934 **Hysteria: The Rise of an Enigma** J. Bogousslavsky,2014-06-23 Hysteria is probably the condition which best illustrates the tight connection between neurology and psychiatry While it has been known since antiquity its renewed studies during the 19th century were mainly due to the work of Jean Martin Charcot and his school in Paris This publication focuses on these early developments in which immediate followers of Charcot including Babinski Freud Janet Richer and Gilles de la Tourette were involved Hysteria is commonly considered as a condition that often leads to spectacular manifestations e g convulsions palsies although both structural and functional imaging data confirm the absence of consistent and reproducible structural lesions While numerous hypotheses have tried to explain the occurrence of this striking phenomenon the precise nosology and pathophysiology of hysteria remain elusive This volume offers an enthralling and informative read for neurologists psychiatrists and psychologists as well as for general physicians historians and everyone interested in the developments of one of the most intriguing conditions in medicine *Oeuvre*

Scientifique Joseph Francois Felix Babinski, **Clinical Lectures on Diseases of the Nervous System** J-M. Charcot,2013-12-19 Originally published in 1991 as part of the Tavistock Classics in the History of Psychiatry series this re edition of J M Charcot s Clinical Lectures on Diseases of the Nervous System provides a unique opportunity to examine the work of one of the last century s most controversial and admired physicians Widely esteemed for his work in neuropathology Charcot was also an innovator in the study of hysteria making important contributions to its study in both women and men

The Clinical Lectures reproduced here are especially important for two key reasons First they provide insight into Charcot's often neglected study of male hysteria especially traumatic shock as well as hysteria among children Secondly they give an opportunity to examine his clinical method and style His presentations and scholarly compilations greatly influenced an entire generation of French and other physicians interested in the study of the unconscious during the turn of the century The introduction which precedes the work places the volume in its social political and historical context It highlights the key features of the historiographical debate surrounding Charcot which ranges in scope from the social and intellectual history of the Third Republic through that of early psychoanalysis It then proceeds with an examination of the key themes both substantive and methodological underlying Charcot's researches providing both a general entrée into the history of medicine and society in this period as well as an explication du texte which carefully analyses the lectures themselves

Breathe, Walk and Chew, 2010-12-03 This volume focuses on the interplay of mind and motion the bidirectional link between thought and action In particular it investigates the implications that this coupling has for decision making How do we anticipate the consequences of choices and how is the brain able to represent these choice options and their potential consequences How are different options evaluated and how is a preferred option selected and implemented This volume addresses these questions not only through an extensive body of knowledge consisting of individual chapters by international experts but also through integrative group reports that pave a runway into the future The understanding of how people make decisions is of common interest to experts working in fields such as psychology economics movement science cognitive neuroscience neuroinformatics robotics and sport science So far however it has mainly been advanced in isolation within distinct research disciplines in contrast this book results from a deliberate assembly of multidisciplinary teams It offers intense focused and genuine interdisciplinary perspective It conveys state of the art and outlines future research directions on the hot topic of Mind and Motion or embodied cognition It includes contributions from psychologists neuroscientists movement scientists economists and others
