Of Parallax And Singularity:

Of Parallax and Singularity Karen L. Havens, 2004-10-01 Of Parallax and Singularity is about Death who as an anthropomorphized and androgenous character finds him herself on trial in a courtroom of universal contention The Dead's rights are disputed at the same time the metaphysics of Time's forces gravitational pull the evidence of evolutionary half life decay the presence of singularities the terrible mask of human war draw all opposites into a virtual chess match of trans digital 1s and 0s Entropy and Order literally strategize within an ever expanding context whose rules of play remain the same and change along multiple parallel lines which strive to meet according to a deconstructed yet constructable limit on all points

Singularity and Transnational Poetics Birgit Mara Kaiser, 2014-12-05 Over the past decade singularity has been a prominent term in a broad range of fields ranging from philosophy to literary and cultural studies to science and technology studies This volume intervenes in this broad discussion of singularity and its various implications proposing to explore the term for its specific potential in the study of literature Singularity and Transnational Poetics brings together scholars working in the fields of literary and cultural studies translation studies and transnational literatures The volume's central concern is to explore singularity as a conceptual tool for the comparative study of contemporary literatures beyond national frameworks and by implication as a tool to analyze human existence Contributors explore how singularity might move our conceptions of cultural identity from prevailing frameworks of self other toward the premises of being as singular plural Through a close reading of transnational literatures from Ireland Germany the Netherlands France and South Africa this collection offers a new approach to reading literature that will challenge a reader's established notions of identity individuality communicability and social cohesion

Everything You Always Wanted to Know about Literature but Were Afraid to Ask Žižek Russell Sbriglia, 2017-02-27 Challenging the widely held assumption that Slavoj Žižek's work is far more germane to film and cultural studies than to literary studies this volume demonstrates the importance of Žižek to literary criticism and theory The contributors show how Žižek's practice of reading theory and literature through one another allows him to critique complicate and advance the understanding of Lacanian psychoanalysis and German Idealism thereby urging a rethinking of historicity and universality His methodology has implications for analyzing literature across historical periods nationalities and genres and can enrich theoretical frameworks ranging from aesthetics semiotics and psychoanalysis to feminism historicism postcolonialism and ecocriticism The contributors also offer Žižekian interpretations of a wide variety of texts including Geoffrey Chaucer's Troilus and Criseyde Shakespeare's The Merchant of Venice Samuel Beckett's Not I and William Burroughs's Nova Trilogy The collection includes an essay by Žižek on subjectivity in Shakespeare and Beckett Everything You Always Wanted to Know about Literature but Were Afraid to Ask Žižek affirms Žižek's value to literary studies while offering a rigorous model of Žižekian criticism Contributors

Goudas, 2012-12-06 After many decades spent in astronomical semi obscurity the Moon has of late suddenly emerged to claim renewed interest on the part of the students of astronomy as well as of other branches of physical science and technology and the reasons which brought this about are indeed of historical significance From time

immemorial astronomy has been debarred from the status of a genuine experimental science by the utter remoteness of the objects of its study With the exception of meteors those small freaks of cosmic matter intercepted by the Earth on its perpetual journey through space the properties of all celestial bodies outside the gravitational confines of our planet could be studied only at a distance namely from the effect of attraction exerted by their masses or from the ciphered message of their light brought to us by nimble footed photons across the intervening gaps of space A dramatic emergence of long range rockets in the last decade bids fair to bring about a profound change in this situation On September 13 1959 a memorable date in the history of human endeavour a man made missile of Russian origin crash landed on the surface of the Moon in the region of its Mare Imbrium and thus ended the age long separation of the Earth and its only natural satellite which lasted not less than 4 billion years

Umbr(a): The Worst Joan Copjec, 2011 **Hamiltonian Perturbation Solutions for Spacecraft Orbit Prediction** Martín Lara, 2021-05-10 Analytical solutions to the orbital motion of celestial objects have been nowadays mostly replaced by numerical solutions but they are still irreplaceable whenever speed is to be preferred to accuracy or to simplify a dynamical model In this book the most common orbital perturbations problems are discussed according to the Lie transforms method which is the de facto standard in analytical orbital motion calculations Due to an oversight an error slipped in Section 4.1 of the book where it is implicitly assumed the case of the Kepler problem The following text should replace Sections 4.1 and 4.2 of the book Cross references may be affected with the new writing In particular former crossed references to Eq 4.3 should now point to current Eq 4.12 Please find the Erratum below

Parallaxing Joyce Penelope Paparunas, Frances Ilmberger, Martin Heusser, 2017-04-10 *Parallaxing Joyce* is a groundbreaking collection of critical essays as it approaches James Joyce's work using parallaxic principles as its overriding theoretical framework While parallax a frequent term in Joyce's work originally derives from astronomy it has been appropriated in this volume to provide fresh perspectives on Joyce's oeuvre By comparing Joyce and Marilyn Monroe films art serializations philosophy translation and censorship among others these scholars transform our way of reading not only Joyce but also the world around us This volume will appeal not only to academic researchers and Joyce enthusiasts but also to anyone interested in literary and

cultural studies **REDEMPTION OF THE DAMNED: VOL. 1 AERIAL PHENOMENA** Martin Shough,2019-06-28

UNRAVELLING AERIAL MYSTERIES OF THE PAST Charles Fort published his first and most influential book The Book of the Damned a century ago in 1919 collecting together many historical reports of strange aerial phenomena Since the birth of the UFO controversy in 1947 Fort s writings have been cited in countless books and web pages Yet this is the first time in a hundred years that researchers have systematically verified the sources and content of every one of these oft recycled stories correcting many errors placing each case in its historical context and submitting it to a careful scientific investigation in an attempt to find a conventional answer What were these reported phenomena Is it possible to find non exotic explanations With the advantage of modern knowledge methods and resources in most cases the answer proves to be yes Some of the solutions found may shock the general reader and surprise even specialists Yet in the end a few well documented events remain unexplained On the Universality of What Is Not William Franke,2020-10-31 Branching out from his earlier works providing a history and a theory of apophatic thinking William Franke s newest book pursues applications across a variety of communicative media historical periods geographical regions and academic disciplines moving from the literary humanities and cultural theory and politics to more empirical fields such as historical anthropology evolutionary biology and cognitive science On the Universality of What Is Not The Apophatic Turn in Critical Thinking is an original philosophical reflection that shows how intransigent deadlocks debated in each of these arenas can be broken through thanks to the uncanny insights of apophatic vision Leveraging Franke s distinctive method of philosophical religious and literary thinking and practice On the Universality of What Is Not proposes a radically unsettling approach to answering or suspending perennial questions of philosophy and religion as well as to dealing with some of our most pressing dilemmas at present at the university and in the socio political sphere In a style of exposition that is as lucid as it is poetic deep rooted tensions between alterity and equality in all these areas are exposed and transcended **Visual Control of Wheeled Mobile Robots** Héctor . M Becerra,Carlos Sagüés,2014-03-26 Vision based control of wheeled mobile robots is an interesting field of research from a scientific and even social point of view due to its potential applicability This book presents a formal treatment of some aspects of control theory applied to the problem of vision based pose regulation of wheeled mobile robots In this problem the robot has to reach a desired position and orientation which are specified by a target image It is faced in such a way that vision and control are unified to achieve stability of the closed loop a large region of convergence without local minima and good robustness against parametric uncertainty Three different control schemes that rely on monocular vision as unique sensor are presented and evaluated experimentally A common benefit of these approaches is that they are valid for imaging systems obeying approximately a central projection model e g conventional cameras catadioptric systems and some fisheye cameras Thus the presented control schemes are generic approaches A minimum set of visual measurements integrated in adequate task functions are taken from a geometric constraint imposed between corresponding image features Particularly the epipolar

geometry and the trifocal tensor are exploited since they can be used for generic scenes A detailed experimental evaluation is presented for each control scheme
