The Interactions of Human Mobility and Farming Systems on Biodiversity and Soil Quality in the Western Highlands of Cameroon Tankou, Christopher Mubeteneh, 2014-01-16 Population growth and the drop in the returns from the major cash crop coffee for small farmers are the main drivers that have influenced the farming systems and mobility of farmers in the Western Highlands of Cameroon The main objective of the research that led to this book was to determine the interactions between farming systems and human mobility in this region of Cameroon A comparative study was conducted through household and field surveys in three villages and conceptualized based on the systems approach The different types of mobility were influenced by household social factors the quest for high valued farm plots and hired labour Urban rural migration contributed to occupation diversification and social mobility The sustainability factor was a function of land use intensity intensity of off farm inputs the household adjustment factor and mobility of the household The sacred groves were rich in plant diversity of varied ecological and economic importance Nitrogen mining was common at all levels of the farming system These determinants and types of mobility claims are pertinent to the research area the sustainability results of the farming systems reflect the reality on the ground the nutrient flux evaluated at the crop and farm levels constitute a valuable database for future research

The Soil-Human Health-Nexus Rattan Lal, 2020-12-20 The term soil health refers to the functionality of a soil as a living ecosystem capable of sustaining plants animals and humans while also improving the environment In addition to soil health the environment also comprises the quality of air water vegetation and biota The health of soil plants animals people and the environment is an indivisible continuum One of the notable ramifications of the Anthropocene is the growing risks of decline in soil health by anthropogenic activities Important among these activities are deforestation biomass burning excessive soil tillage indiscriminate use of agrochemicals excessive irrigation by flooding or inundation and extractive farming practices

Soil pollution by industrial effluents and urban waste adversely impacts human health Degradation of soil health impacts nutritional quality of food such as the uptake of heavy metals or deficit of essential micro nutrients and contamination by pests and pathogens Indirectly soil health may impact human health through contamination of water and pollution of air This book aims to Present relationships of soil health to human health and soil health to human nutrition Discuss the nexus between soil degradation and malnourishment as well as the important links between soil plant animal and human health Detail reasons oil is a cause of infectious diseases and source of remedial measures Part of the Advances in Soil Sciences series this informative volume covering various aspects of soil health appeals to soil scientists environmental scientists and public health workers Human Interaction with Reused Soil ,2000 *The Soils of Egypt* Hassan El-Ramady,Tarek Alshaal,Noura Bakr,Tamer Elbana,Elsayed Mohamed,Abdel-Aziz Belal,2018-08-20 This book reviews the distribution of soils across Egypt their history genesis pollution and management The conservation of Egyptian soils soils and their connections to human activities as well as some future soil issues are also highlighted It is well known that soil is the main source for food feed fuel and fiber production Accordingly the study of soils is not only a crucial issue but also an urgent task for all nations worldwide Due to their important roles in agroecosystems as well as many aspects of our lives soils have direct and indirect functions in the agricultural industrial and medicinal sectors Therefore understanding the physical chemical and biological properties of soils as well as soil security have now become emerging issues Climate change has a very dangerous dimension in Egypt concerning the rising sea level Many coastal zones are already threatened by this sea level rise and may ultimately disappear At the same time water shortages and soil pollution represent the main challenges for the Egyptian nation Generally speaking the environmental challenges that Egypt now faces include improving and sustaining soil health soil carbon sequestration wastewater treatment and avoiding the overuse of fertilizers and pesticides Therefore this book examines in detail the soils of Egypt from various perspectives including their genesis history classification pollution and degradation soil security soil fertility and land uses **Soils in Archaeological Research** Vance T. Holliday,2004-08-19 Soils invaluable indicators of the nature and history of the physical and human landscape have strongly influenced the cultural record left to archaeologists Not only are they primary reservoirs for artifacts they often encase entire sites And soil forming processes in themselves are an important component of site formation influencing which artifacts features and environmental indicators floral faunal and geological will be destroyed and to what extent and which will be preserved and how well In this book Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world The focus will be on principles of soil geomorphology soil stratigraphy and soil chemistry and their applications in archaeological research *Methods for Assessment of Soil Degradation* Rattan Lal,Winfried E. H. Blum,C. Valentin,B.A. Stewart,2020-11-26 Soil degradation has serious global impacts on agronomic economic and sociopolitical conditions however statistics regarding the degree of these impacts has been largely unreliable This book aims to

standardize the methodology for obtaining reliable and objective data on soil degradation It will also identify and develop criteria for assessing the severity of soil degradation providing a realistic scenario of the problem

Nair,2021-08-19 This book focusses on the thermodynamics of soil nutrient bioavailability and in particular the most important plant nutrients such as phosphorus and potassium among major nutrients and zinc among micronutrients It proposes a paradigm shift in the approach to global soil testing procedures Historically soil testing has been used to quantify availability of essential plant nutrients to field grown crops However contemporary soil tests are based on philosophies and procedures developed several decades ago without significant changes in their general approach For a soil test to be accurate one needs to clearly understand the physico chemico physiological processes at the soil root interface and an understanding of soils and plant root systems as polycationic systems is essential It is this knowledge that leads to sound prescriptive soil nutrient management inasmuch as soil nutrient bioavailability vis vis fertilizer application is concerned because of all the factors which govern sustainability in crop production the nutrient factor is the most important yet it is also least resilient to management This book provides a clear scientific basis of the thermodynamics of soil nutrient bioavailability which routine soil testing does not provide

Biological Approaches to Regenerative Soil Systems

Norman Uphoff,Janice Thies,2023-10-27 Agriculture in the 21st century will need considerable modification to remain both productive and sustainable Greater production is needed to meet the needs of our still growing populations and to combat hunger and poverty Declines in soil health and the pollution of water sources are making many of our production systems less tenable These adverse trends are exacerbated

more and more by the impacts of climate change There are fortunately alternative methods available for agricultural practice that can countervail these constraints Biological Approaches to Regenerative Soil Systems brings together the work of both researchers and practitioners to map out better approaches to contemporary agriculture that draw upon both old and new knowledge It presents the science that underlies more biologically driven strategies as well as contemporary innovative experiences in diverse parts of the world Both accepted research and these varied experiences encourage confidence that these approaches not relying primarily on the introduction of new varieties and on exogenous inputs can succeed This book updates and revises a preceding volume Biological Approaches to Sustainable Soil Systems published by CRC Press in 2006 So much has been learned and done on this subject in the past decade and a half that a second edition was warranted For instance the first edition was published knowledge about plant soil microbiomes which are a frequent focus in this book has mushroomed Because sustainability is a broad term and an end state the editors preferred to assemble expertise regarding regenerative agriculture which is concerned with the means for achieving sustainability The concept of regenerative soil systems entities that are more complex and multifaceted than soil alone also incorporates a concern with having more resilient agricultural systems ones that are better able to cope with the multiple stresses of climate change that are foreseen for the decades ahead The book s chapters representing a wide range of disciplines were contributed by 84 scientists and practitioners from 20 countries Although they come from persons with in depth knowledge of their respective fields the chapters are written to be accessible to readers who are not trained in the specialized subjects Taken together the chapters provide students researchers practitioners planners and policy makers with a comprehensive understanding of both the science and the steps needed to regenerate and sustain soil systems around the world for the long term benefit of humankind and the environment
