The problems of taste and odours in water and fish are of major concern particularly for the drinking water and fisheries industries. Consumer concern can lead to economic and even political difficulty for both industry and regulators. The papers presented in this volume review recent advances in the understanding of the biochemistry of off flavours and their production by microorganisms, developments in the techniques of off flavour abatement and control, and attempts to reach a consensus on sensory characterization of off flavours.

Off-Flavours in the Aquatic Environment 1997 A. Bruchet, 1999

Off flavours and odours are recognised by the water industry worldwide as one of the major causes of complaints from consumers and the general public. Off flavours in drinking water may be harmless but can seriously diminish consumer confidence; similarly, odours from treatment plants or reservoirs can have significant economic consequences. Natural or anthropogenic micropollutants in seawater or freshwater can lead to tainting of fish or seafood. Such episodes may be caused by complex mixtures of chemicals that can only be characterised with highly sensitive analytical techniques. Assessing their impacts may require sophisticated sensory evaluation methods based on human panels. The 41 papers selected for these proceedings provide a highly authoritative examination of the issues relating to tastes and odours in the water environment. Starting with an updated Taste and Odour Wheel to characterise taste and odour problems and indicate causes, some of the world's foremost experts report on the origins and impacts of off flavour problems and treatment strategies that can combat them. This book will be a valuable resource for scientists and engineers involved in research into this subject and for all those in the water industry tasked with combating off flavours.

Taste and Odour in Source and Drinking Water Tsair-Fuh Lin, Sue Watson, I. H. (Mel) Suffet, 2018-03-15

This book provides an updated evaluation of the characterization and management of taste and odour (T/O) in source and drinking waters. Authored by international experts from the IWA Specialist Group on Off flavours in the Aquatic Environment, the book represents an important resource that synthesizes current knowledge on the origins, mitigation and management of aquatic T/O problems. The material provides new knowledge for an increasing widespread degradation of source waters and global demand for high quality potable water. Key topics include early warning detection and source tracking, chemical sensory and molecular diagnosis, treatment options for common odorants and minerals, source management, modelling and risk assessment, and future research directions. *Taste and Odour in Source and Drinking Water* is directed towards a wide readership of scientists, engineers, technical operators and managers and presents both practical and theoretical material, including an updated version of the benchmark Drinking Water Taste and Odour Wheel and a new biological wheel to provide a practical and informative tool for the initial diagnosis of the chemical and biological sources of

Improving Farmed Fish Quality and Safety Øyvind

Lie,2008-08-20 Global aquaculture production has grown rapidly over the last 50 years It is generally accepted that there is limited potential to increase traditional fisheries since most fish stocks are well or fully exploited Consequently increased aquaculture production is required in order to maintain global per capita fish consumption at the present level Fish farming enables greater control of product quality and safety and presents the possibility of tailoring products according to consumer demands This important collection reviews safety and quality issues in farmed fish and presents methods to improve product characteristics The first part of the book focuses on chemical contaminants chemical use in aquaculture and farmed fish safety After an opening chapter discussing the risks and benefits of consumption of farmed fish subsequent contributions consider environmental contaminants pesticides drug use and antibiotic resistance in aquaculture Part two addresses important quality issues such as selective breeding to improve flesh quality the effects of dietary factors including alternative lipids and proteins sources on eating quality microbial safety of farmed products parasites flesh colouration and off flavours Welfare issues and the ethical quality of farmed products are also covered The final part discusses ways of managing of product quality with chapters on HACCP monitoring and surveillance authenticity and product labelling With its distinguished editor and international team of contributors Improving farmed fish quality and safety is a standard reference for aquaculture industry professionals and academics in the field Reviews safety and quality issues in farmed fish and presents methods to improve product characteristics Discusses contaminants persistent organic pollutants and veterinary drug residues and methods for their reduction and control Addresses important quality issues genetic control of flesh characteristics and the effects of feed on product nutritional and sensory quality **Fisheries Review** ,1992 *Selected*

Food Taints and Off-Flavours M.J. Saxby,2012-12-06 Contamination of food with extremely low levels of certain compounds can cause an unpleasant taste This can result in the destruction of vast stocks of product and very substantial financial losses to food companies The concentration of the alien compound in the food can be so low that very sophisticated equipment is needed to identify the components and to determine its source It is vital that every company involved in the production distribution and sale of foodstuffs are fully aware of the ways in which contamination can accrue how it can be avoided and what steps need to be taken in the event that a problem does arise This book provides the background information needed to recognize how food can become tainted to draw up guidelines to prevent this contamination and to plan the steps that should be taken in the event of an outbreak The new edition has been extensively revised and updated and includes substantial new material on the formation of off flavors due to microbiological and enzymic action and on sensory evaluation of taints and off flavors A new chapter on off flavors in alcoholic beverages has been added Written primarily for industrial food technologists this volume is also an essential reference source for workers in research and government institutions *Pond Aquaculture Water Quality Management* Claude E. Boyd,C.S. Tucker,2012-12-06 The efficient and profitable production of fish crustaceans and other aquatic organisms in aquaculture depends on a suitable environment in which they can reproduce and grow Because those organisms live in water the major environmental concern within the culture system is water quality Water supplies for aquaculture systems may naturally be of low quality or polluted by human activity but in most instances the primary reason for water quality impairment is the culture activity itself Manures fertilizers and feeds applied to ponds to enhance production only can be partially converted to animal biomass Thus at moderate and high production levels the inputs of nutrients and organic matter to culture units may exceed the assimilative capacity of the ecosystems The result is deteriorating water quality which stresses the culture species and stress leads to poor growth greater incidence of disease increased mortality and low production Effluents from aquaculture systems can cause pollution of receiving waters and pollution entering ponds in source water or chemicals added to ponds for management purposes can contaminate aquacultural products Thus water quality in aquaculture extends into the arenas of environmental protection and food quality and safety A considerable body of literature on water quality management in aquaculture has been accumulated over the past 50 years The first attempt to compile this information was a small book entitled *Water Quality in Warmwater Fish Ponds* Boyd I 979a **Aquaculture Engineering** Odd-Ivar Lekang,2019-10-25 The revised edition of the comprehensive book that explores the principles and applications of aquaculture engineering Since the publication of the

first edition of Aquaculture Engineering there have been many advances in the industry The revised and thoroughly updated third edition of Aquaculture Engineering covers the principles and applications of all major facets of aquaculture engineering and the newest developments in the field Written by a noted expert on the topic the new edition highlights information on new areas of interest including RAS technology and offshore fish farming Comprehensive in scope the book examines a range of topics including water transportation and treatment feed and feeding systems fish transportation and grading cleaning and waste handling instrumentation and monitoring removal of particles aeration and oxygenation recirculation and water reuse systems ponds and the design and construction of aquaculture facilities This important book Presents an updated review of the basic principles and applications in aquaculture engineering Includes information on new areas of focus RAS technology and offshore fish farming Contains a revised edition of the classic resource on aquaculture engineering Continues to offer an authoritative guide written by a leading expert in the field Written for aquaculture scientists and managers engineers equipment manufacturers and suppliers and biological scientists the third edition of Aquaculture Engineering is the authoritative guide to the topic that has been updated to include the most recent developments in the industry
