Off Into Space:

Living Off the Land in Space C Bangs, Greg Matloff, Les Johnson, 2007-08-24 Human civilization has evolved to the point at which we can consider tapping space resources and expanding beyond Earth's atmosphere. The Introduction surveys possible motivations for large scale human emigration to space. Since our early ancestors began to move out of Africa, humans have constantly expanded their range. Today the pattern of human settlement extends from pole to pole. Humans regularly visit the upper troposphere and ocean floor, and technology has enabled a few to even reside above the atmosphere in space stations. For the next few millennia, at least barring breakthroughs, the human frontier will include the solar system and the nearest stars. Will it be better to settle the Moon, Mars, or a nearby asteroid, and what environments can we expect to find in the vicinity of nearby stars are questions that need to be answered if mankind is to migrate into space.

The Quirks & Quarks Guide to Space Jim Lebars, 2008-02-19 For everyone who's curious about what's new under and over and around the stars. Douglas Adams famously pronounced in *The Hitchhiker's Guide to the Galaxy* that the answer to life, the universe, and everything was 42. Quirks & Quarks, whose approach to science owes almost as much to Adams as it does to Newton or Einstein, or Hawking, have flipped that notion through a gap in the space-time continuum or something like that and come up with answers to the 42 essential questions about space. Much about the universe is very hard for most of us to grasp, and if anyone can explain these mind-bending aspects of the heavens above it's the Quirks & Quarks producers, who have been bringing Canadians understandable science with trademark humour for more than thirty years. In their *Guide to Space* they answer such pressing questions as: Where does space begin? Why is most of the universe missing? Is there intelligent life in the universe? And the real puzzler: What came before the Big Bang? They also answer questions we wish we'd thought to ask, such as: Can you surf a gravity wave? and Why is the universe's temperature on my TV? There are answers, as well, to far more practical questions like: What happens when you fall into a black hole? and How will the universe end? The answers, which have been vetted by a team of astronomers, are witty, authoritative in depth, accurate up to date astronomically, and of course, quirky.
