Nominations of Edward P. Lazear, Randall S. Kroszner, and Kevin M. Warsh United States. Congress. Senate. Committee on Banking, Housing, and Urban Affairs,2007 *Emerging Financial Markets In The Global Economy* David Nickerson,Larry Sawers,Daniel Schydlowsky,2000-03-24 The rapid emergence of active financial markets in a number of developing and transition countries during the 1990s is a momentous phenomenon Until recently most developing countries severely manipulated and repressed their financial markets The dramatic increase in the influence of neo liberal thinking and laissez faire governance in developing countries has recently led to serious capital market reform in scores of countries Most countries without financial market reform are anxiously studying their successful neighbors in order to adopt policies programs and regulations that have a proven track record This collection of papers addresses many of the important issues raised by these dramatic changes including restructuring pension systems organizing new equity markets designing financial systems to deal with systemic risk dealing with the overhang and bad debts and attracting foreign direct investments Several papers deal with informal credit markets examining the effect of informal finance on economic development and the exponential growth in microfinance by private financial institutions in Latin America and in the United States The book is intended for policy makers and scholars interested in capital markets in developing and transition economies It is also suitable for use as a supplementary text in upper level undergraduate and graduate courses in development finance *The New Financial Architecture* Benton E. Gup,2000-09-30 Bank failures crises global banking megamergers changes in technology the effect of these world events is to weaken existing methods of regulating bank safety and soundness and even to make some methods ineffective Federal regulators are evaluating new ways to solve them Dr Gup and his panel of academics and regulatory professionals explore these problems and the difficulties in implementing solutions They point out that global banking megamergers and changes in technology are drastically altering the way financial services are delivered They also argue that existing methods of bank regulation formulated in the United States and elsewhere as early as the 19th century are not able to cope with these changes The search now underway for new methods that are global in scope Inevitably they will involve cross border supervision and international cooperation Covering a wide range of topics from the rationale of banking regulation to optimal banking regulation in the new world environments this book examines the

innovative tools needed to cope with these problems Greater reliance on market discipline the use of internal controls based on statistical models such as Value at Risk and subordinated debt are discussed This timely probing analysis of one of the hottest topics in bank regulation today is an important resource for professionals and their academic colleagues in the fields of banking finance investment and world trade
