contemporary archaeological and anthropological research which has demonstrated that many of these societies had complex social economic and political structures This volume considers two British Columbia Native communities the Lillooet and Shuswap communities of Fountain and Pavilion and traces their development into complex societies The authors explore the relation between resource characteristics and hunter gatherer adaptations and examine the use of fish animal and plant species documenting their availability and the techniques used in their gathering processing and storing The book also shows how cultural practices such as raiding potlatching and stewardship of resources can be explained from a cultural ecological point of view An important contribution to the study of hunting and gathering cultures in the Northwest this book is the most detailed examination of the subsistence base of a particular hunting and gathering group to date Its exploration of the reasons why complex hunting and gathering societies emerge as well as the ecological relationships between cultures and resources will make an important contribution to the study of cultural ecology and contemporary archaeology

episodes from the 1870s to the present deal with major staple industries such as the early fur trade fishing mining and forestry and with the struggle of labourers against their employers in communities such as New Westminster and Fraser Mills and in specific sectors such as telecommunications and education Many of the analyses show that ethnicity acts both as a focus of integration and resistance against external forces in the larger society and as a point of division and antagonism internal to the working class The activities of the working class and its relationships to other parts of society are of primary importance in explaining social and economic change in the province and in the country Workers Capital and the State in British Columbia will be of interest to students of class labour and community relations Field & Stream ,1992-03 FIELD STREAM America s largest outdoor sports magazine celebrates the outdoor experience with great stories compelling photography and sound advice while honoring the traditions hunters and fishermen have passed down for generations

Farley,2011-11-01 The Atlas of British Columbia is the first major cartographic study of the province to be published since 1956 Created through close co operation between government the private sector and the university it is the successor to the British Columbia Atlas of Resources which for twenty years has been the standard reference work used by schools industry government and the general public The most recent data available have been used

to give an accurate comprehensive picture of British Columbia's economy as it is today. Comparative studies show the development of the province's manpower and natural resources as well as the rapid growth of industry and technology since the beginning of the century. In part, the emphasis of the atlas reflects thousands of specific requests for up-to-date resource information recorded over the last ten years. For easy reference, the three main subject areas are divided into sixty-one topics, each illustrated by a map page and a facing page of interpretive text. They include: The People, changes in population and settlement patterns, distribution of Native peoples, growth of the labour force; The Environment, geological, topographical, and climatic features; concentration of fish and game; Resource Use, distribution of natural resources, development of industry, communication and transportation links, location of energy resources, development of recreational lands. The atlas has 115 maps, 74 illustrations, tables, and diagrams. Bold colours and explicit keys contribute to the easy, rapid interpretation of data. A Gazetteer and an Historical and Statistical Summary are included to provide a quick reference for the most commonly sought facts and to supplement maps and text.

Canada W. Lefroy, 1907 **Commercial Fisheries Review**, 1960 *Water in North American Environmental History* Martin V. Melosi, 2022-06-07

Water in North American Environmental History offers 25 case studies that explore the range of uses and perceptions of water throughout Canadian, Mexican, and United States history. Water has served a myriad of purposes historically: as human sustenance, agricultural irrigation, sanitation, fire protection, military defense, power generation, transportation, and much more. Water and its uses provide an excellent entrance into the study of humans and the environment, not only because water is a vital resource for life, but also because water as a medium is so intimately woven into the everyday experiences of humans and into society's economic, political, and social fabric. A North American perspective is not representative of the world's water use, but it is an area with a linked history and many overlapping human and environmental features and concerns. With a continental perspective, the book explores many disparate topics without being confined to the history and experiences of just one country. The chapters are short but descriptive and departure points for what they tell us about the human experience in dealing with water and the environmental implications of water use. The text leads students to consider water in relation to society and to the past. The book will be of interest to students of environmental history, geography, and the environmental sciences.
