**Climate-Ocean Interaction** M.E. Schlesinger, 2012-12-06 Preface This book is the culmination of a workshop jointly organized by NATO and CEC on Climate Ocean Interaction which was held at Lady Margaret Hall Oxford University during 26-30 September 1988. The objective of the ARW was to assess the current status of research on climate ocean interaction with a major focus on the development of coupled atmosphere ocean ice models and their application in the study of past present and possible future climates. This book contains 16 chapters divided into four parts: Introduction, Observations of the Climate of the Ocean, Modelling the Atmospheric, Oceanic and Sea Ice Components of the Climatic System, and Simulating the Variability of Climate on Short, Medium and Long Time Scales. A fifth part contains the reports of the five Working Groups on Climate Observations, Modelling ENSO, Modelling and Prediction, Climate Ocean Interaction on Time Scales of Decades to Centuries, and Impact of Paleoclimatic Proxy Data on Climate Modelling. Preface ix Acknowledgements I thank Howard Cattle and Neil Wells for their guidance and assistance as members of the Workshop Organizing Committee. I particularly thank Michael Davey for all his efforts as Local Organizer to make the ARW a success. I also thank the staff of Lady Margaret Hall Oxford University for their help with the arrangements for the ARW. **The Impact of Climatic Variations on**

**Agriculture** M.L. Parry, T.R. Carter, N.T. Konijn, 2012-12-06 Three important studies were initiated in the 1970s to investigate the relationship between climatic variations and agriculture: by the National Defense University 1980 on Crop Yields and Climate Change to the Year 2000 by the U.S. Department of Transportation 1975 on Impacts of Climatic Change on the Biosphere and by the U.S. Department of Energy 1980 on Environmental and Societal Consequences of a Possible CO<sub>2</sub> Induced Climatic Change. The CLAP 2 study. These were pioneering projects in a young field. Their emphasis was on measuring likely impacts of climatic variations rather than on evaluating possible responses and they focused on first order impacts e.g. on crop yields rather than on higher order effects on society. A logical next step was to look at higher order effects and potential responses as part of a more integrated approach to impact assessment. This was undertaken by the World Climate Impact Program (WCIP) which is directed by the United Nations Environment Program (UNEP). The WCIP is one of four aspects of the World Climate Program which was initiated in 1979. Climatic Variations and Variability: Facts and Theories A.L.
