Energy Efficient Non-Road Hybrid Electric Vehicles Johannes Unger, Marcus Quasthoff, Stefan Jakubek, 2016-02-10 This book analyzes the main problems in the real time control of parallel hybrid electric powertrains in non road applications that work in continuous high dynamic operation It also provides practical insights into maximizing the energy efficiency and drivability of such powertrains It introduces an energy management control structure which considers all the physical powertrain constraints and uses novel methodologies to predict the future load requirements to optimize the controller output in terms of the entire work cycle of a non road vehicle The load prediction includes a methodology for short term loads as well as cycle detection methodology for an entire load cycle In this way the energy efficiency can be maximized and fuel consumption and exhaust emissions simultaneously reduced Readers gain deep insights into the topics that need to be considered in designing an energy and battery management system for non road vehicles It also becomes clear that only a combination of management systems can significantly increase the performance of a controller
