Stuart, 2012-08-12 On a sweltering August morning a woman walked into a Buddhist temple near Phoenix and discovered the most horrific crime in Arizona history Nine Buddhist temple members six of them monks committed to lives of non violence lay dead in a pool of blood shot execution style The massive manhunt that followed turned up no leads until a tip from a psychiatric patient led to the arrest of five suspects Each initially denied their involvement in the crime yet one by one under intense interrogation they confessed Soon after all five men recanted saying their confessions had been coerced One was freed after providing an alibi but the remaining suspects dubbed The Tucson Four by the media remained in custody even though no physical evidence linked them to the crime Seven weeks later investigators discovered almost by chance physical evidence that implicated two entirely new suspects The Tucson Four were finally freed on November 22 after two teenage boys confessed to the crime yet troubling questions remained Why were confessions forced out of innocent suspects

Measuring Organised Crime in Belgium Chr. Black,Tom Vander Beken,Brice De Ruyver,2000 The analysis of organised crime is of interest to academics policymakers and regulators The approach taken is necessarily determined by the requirement for analysis and the available resources This book is the outcome of a six month research undertaken for the Belgian Gendarmerie at Ghent University It presents a methodology to measure the impact of organised crime in Belgium and its research design has been shaped primarily by the demands of applied research In doing so the research draws extensively from a breadth of research into organised crime while being shaped by the intelligence and policy requirements of the Gendarmerie s Organised Crime unit This is reflected in the use of a risk management process that provides the iterative framework for the methodology Central to this is a three fold focus that incorporates organised crime groups illicit markets and economic sectors Each element relies upon a different method of analysis however their complementarity is ensured through the organising principle of the spectrum of enterprise The result is a methodology that is capable of being incorporated into existing systems and provides a richer form of strategic assessments regarding the impact of organised crime in Belgium

Toxicity and pharmacokinetic biomarkers for personalized non-small cell lung cancer treatment Anna Svedberg,2020-01-14 Lung cancer is the leading cause of cancer related deaths worldwide Unfortunately lung cancer is usually discovered at a late stage when the curative treatment options are limited The treatment can include surgery radiation chemotherapy targeted therapy and now also immunotherapy The challenge in cancer treatment is to eradicate cancer by the use of harsh treatments while still keeping the patient alive For this purpose treatments with severe toxicities are usually accepted but regularly lead to dose reductions or postponed treatment Large variations in response are generally observed between patients treated with the same drug at the same dose The dose may be adequate in one patient while ineffective or cause severe adverse drug reactions in other patients The occurrence of drug induced toxicities can however also be a positive indicator of treatment response In personalized treatment it is of importance to select the most suitable treatment option and give it at the most favorable dose to enable the patients to stay on treatment during the time the treatment is able to affect cancer since the tumor commonly develops resistance towards the treatment eventually In this thesis inter individual variability in pharmacokinetics and toxicity for the targeted therapy erlotinib associated with the adverse events skin rash and diarrhea was studied Inter individual variability in toxicity was also studied for the chemotherapy treatment gemcitabine carboplatin linked to the hematological toxicities neutropenia and leukopenia Erlotinib was studied in papers I IV Erlotinib and its metabolite concentrations were determined using a validated LC MS MS method Diarrhea was associated with erlotinib and the metabolite M13 while skin rash was associated with the activity of the erlotinib metabolizing enzyme CYP3A and the ABCG2 single nucleotide polymorphism rs10856870 CYP3A was also shown to be induced during treatment Additionally in vitro studies showed that genetic variability in ABCG2 contributes to differences in intracellular concentrations Genes and gene variants were found to be associated with gemcitabine carboplatininduced toxicity in paper V The variants were partially validated and two models were developed to estimate the risk of leukopenia or neutropenia based on a set of genetic variants Lungcancer r den cancerform som leder till flest antal d dsfall runt om i v rlden Tyv rr uppt cks lungcancer oftast i ett sent skede n r m jligheten att bota cancer n begr nsad Lungcancer kan behandlas med flera behandlingsmetoder antingen enskilt eller i kombination som till exempel kirurgi str lning cellgifter m
