Biogenic Nano-Particles and their Use in Agro-ecosystems Mansour Ghorbanpour, Prachi Bhargava, Ajit Varma, Devendra K. Choudhary, 2020-03-20 Several nano scale devices have emerged that are capable of analysing plant diseases nutrient deficiencies and any other ailments that may affect food security in agro ecosystems It has been envisioned that smart delivery systems can be developed and utilised for better management of agricultural ecosystems These systems could exhibit beneficial multi functional characteristics which could be used to assess and also control habitat imposed stresses to crops Nanoparticle mediated smart delivery systems can control the delivery of nutrients or bioactive and or pesticide

molecules in plants It has been suggested that nano particles in plants might help determine their nutrient status and could also be used as cures in agro ecosystems Further to enhance soil and crop productivity nanotechnology has been used to create and deliver nano fertilizers which can be defined as nano particles that directly help supply nutrients for plant growth and soil productivity Nano particles can be absorbed onto clay networks leading to improved soil health and more efficient nutrient use by crops Additionally fertilizer particles can be coated with nano particles that facilitate slow and steady release of nutrients reducing loss of nutrients and enhancing their efficiency in agri crops Although the use of nanotechnology in agro ecosystems is still in its early stages and needs to be developed further nano particle mediated delivery systems are promising solutions for the successful management of agri ecosystems In this context the book offers insights into nanotechnology in agro ecosystems with reference to biogenic nanoparticles It highlights the occurrence and diversity of Biogenic Nanoparticles mechanistic approach involved in the synthesis of biogenic nanoparticles synthesis of nanoparticles using photo activation and their fate in the soil ecosystem potential applications of nanoparticles in agricultural systems application and biogenic synthesis of gold nanoparticles and their characterization impact of biogenic nanoparticles on biotic stress to plants mechanistic approaches involved in the antimicrobial effects and cytotoxicity of biogenic nanoparticles role of biogenic nanoparticles in plant diseases management relevance of biological synthesized nanoparticles in the longevity of agricultural crops design and synthesis of nano biosensors for monitoring pollutants in water soil and plant systems applications of nanotechnology in agriculture with special refer to soil water and plant sciences A useful resource for postgraduate and research students in the field of plant and agricultural sciences it is also of interest to researchers working in nano and biotechnology
