Rendering Techniques 2001 S.J. Gortler,K. Myzskowski,2012-12-06 This book contains the proceedings of the lih Eurographics Workshop on Rendering th which took place from the 25 to the 27th of June 2001 in London United Kingdom Over the past 11 years the workshop has become the premier forum dedicated to research in rendering Much of the work in rendering now appearing in other conferences and journals builds on ideas originally presented at the workshop This year we received a total of 74 submissions Each paper was carefully reviewed by two of the 28 international programme committee members as well as external reviewers selected by the co chairs from a pool of 125 individuals In this review process all submissions and reviews were handled electronically with the exception of videos submitted with a few of the papers The overall quality of the submissions was exceptionally high Space and time constraints forced the committee to make some difficult decisions In the end 29 by papers were accepted and they appear here Almost all papers are accompanied color images which appear at the end of the book The papers treat the following varied topics methods for local and global illumination techniques for acquisition and modeling from images image based rendering new image representations hardware assisted methods shadow algorithms visibility perception texturing and filtering Each year in addition to the reviewed contributions the workshop includes invited presentations from internationally recognized experts   **SIGGRAPH (Special Interest Group on Computer Graphics) 95** Robert (editor) Cook,ACM (Association for Computing Machinery). collaborate with an application scientist or engineer who needs to visually explore or study an object which is given by a set of sample points which originally may or may not have been connected by a mesh At some point one generally employs low order piecewise polynomial approximationsof an object using one or several dependent functions In order to have an understanding of a higher dimensional geometrical object or function ef cient algorithms supporting real time analysis and manipulation tation zooming are needed Often the data represents 3D or even time varying 3D phenomena such as medical data and the access to different layers slices and structures the underlying topology comprising such data is needed
